

Gold Dataset Human Review Packet

- Generated at (UTC): '2026-07-09T17:29:50.628847+00:00'
- Source candidates: 'datasets/gold/candidates/candidate_gold.jsonl'
- Total examples: '100'
- No model inference was used to generate this package.

Reviewer Instructions

1. Read the full essay before assigning any rubric scores.
2. Use only the essay text and prompt context in this packet; do not infer external facts unless directly stated.
3. Score each rubric criterion from 0 to 4, then assign a holistic AP-style score from 1 to 6.
4. Document at least one strength and one actionable improvement in educational language.
5. Flag any logical fallacy claims only when the claim is explicitly supported by essay evidence.
6. If uncertain, mark confidence and explain uncertainty in notes rather than forcing a precise claim.

Shared Rubric

- Criterion score scale: '0-4'
- Holistic AP-style score scale: '1-6'

Criteria

- 'thesis_focus': **Thesis and focus** - Clear, defensible claim aligned to prompt.
- 'evidence_commentary': **Evidence and commentary** - Relevant evidence and explanation of significance.
- 'organization_coherence': **Organization and coherence** - Logical structure and transitions.
- 'reasoning_logic': **Reasoning and logic** - Validity of argument, counterargument handling, and inference quality.
- 'style_conventions': **Style and conventions** - Control of language, grammar, and tone.

Holistic Anchors

- '6': Consistently strong argumentation, reasoning, and writing quality.
- '5': Clear and effective overall with minor weaknesses.
- '4': Adequate argument with uneven development or clarity gaps.
- '3': Limited control; partial argument development.
- '2': Weak argumentation with major reasoning/writing gaps.
- '1': Minimal or off-task response with serious deficiencies.

Example 001: 'gold-candidate-001'

- 'original_dataset': 'datasets/training'
- 'original_id': 'train:9465'
- 'score': '43.0'
- 'prompt_id': '8'
- 'essay_length': '847'
- 'sampling_reason': 'prompt_quota(8), score_decile(9), length_band(long), quality_band(high)'

Prompt

'8'

Essay

'''text

Being with family and friends during a memorable trip always seems to spark a smile. There are

always times to look back on; whether they are fond memories, or thoughts of nostalgia. I was about to graduate, and my parents had just broke the news to me that we were going on a trip to @LOCATION1 after the year was finished. We had the date set; @DATE1, right after school was over. The first reaction out of my mouth was filled with entreatment, wishing for my best friend to join us on this trip. My parents took the time and thoughtfully considered all the advantages and disadvantages, and rapidly responded in the affirmative. I was thrilled to know that the memories I was about to create with my closest family members were now to include my best friend. First thing was first, I had to get down to business. I needed to call my friend, @PERSON1, and ask her if she'd like to come along. Selfishly assuming that her immediate response would be an exuberant "@CAPS1!", I was @CAPS4 first devastated when she postponed her response and didn't @CAPS6 seem too excited. I didn't @CAPS6 consider the fact that there @MONTH1 have been some sort of miscommunication. She talked it over with her mother, and gave me a call back. I had made the mistake of not telling her that we would have her financially covered for airfare, dining, and hotel rooms. We cleared everything up, and they decided she @CAPS3 join us. The two of us together couldn't @CAPS6 have been more ecstatic if we tried! @PERSON1 and I made a countdown board that started around two months from our departure date. There were many factors that we would take into hand while planning. As we measured out exactly how much time we had, we also planned which landmarks, resorts, and shops we would visit. Our family friend lived in @LOCATION1 @CAPS4 the time, so she gave us a tour of the island. Having such a close acquaintance to guide us made the trip even more fun. She knew all the local hangout spots, and had access to the military beaches because she works in @ORGANIZATION1! Many humorous occurrences happened often while we were on that vacation, but some of the most memorable moments happened in the hotel while I was with @PERSON1 and my mother. My mom has always had a way to make every situation hilarious, so it was a blast when we went out on a girls night. First, and most significant of our adventures, we went shopping in the mall that was attached to our hotel. There was an abundance of varied small clothing stores, food shops, and jewelry outlets. One of our favorite stores that we visited was a @CAPS6-shirt shop with chocolate infused fabrics! We spent so much time looking @CAPS4 all of the designs, that I think we ended up carrying a wave of cocoa with us for the rest of the night. As soon as we finished our shopping quest in the town center, we worked our way back up to the room, laughing and involved in pointless girl talk. The three of us girls shuffled with smiles, sore feet, and new bags onto the elegant, ornately designed golden elevator. My mother pushed the button to take us to our floor, while @PERSON1 carried on a story about plans we had the night before. Absorbed in conversation, we hauled our new things down the long hallway to our room. Realizing that we didn't @CAPS6 have a key card to open our room's door, the three of us decided that we should just knock on the door and my father would answer. "@CAPS2 was supposed to be back from renting our surf boards by now, so why isn't @CAPS6 @CAPS2 answering?" we thought, "@CAPS3 @CAPS2 still be out on the beach?" @CAPS4 this point our conversation died down a bit as we tried to figure out what to do. I sent a message to my dad's cell phone, and @CAPS2 said @CAPS2 was in the room. We ended up pounding on the door for a good five minutes, assuming @CAPS2 was playing a joke on us by not answering. After waiting a few moments in confused silence, I began to notice a low buzzing voice coming from inside the room. I turned to my mother and best friend, and @CAPS3 barely keep from laughing. It was then that it hit me, and I said to both of them, "@CAPS5 guys! We didn't @CAPS6 leave a @CAPS6.V. on!" We immediately halted our intrusion, moved as quickly as we @CAPS3 away from the door, and continued to howl with laughter. My mother had hit the wrong floor button on the elevator! We were so absorbed in having a good time that we didn't @CAPS6 even realize we were bothering someone, and embarrassing ourselves! It wasn't @CAPS6 just one moment or one trip, it is now a lifetime of joy because I can look back on those memories and smile @CAPS4 them. It's these moments that I treasure the most.

'''text

Author Katherine Paterson proclaims, 'All of us can think of a book that we hope none of our children have taken off the shelf. But if I have the right to remove that book from the shelf - that work i abhor - then you also have exactly the same right and so does everyone else. And then we have no books left on the shelf for any of us.' A controversial issue in today's society are people's conflicting views on censorship in libraries. Many types of books, magazines, music, movies, and much more have been banned from being put on the shelves of libraries because of their content. From personal experience, observations, and reading of the issue censorship should not be allowed in libraries. The shelves of libraries will soon be empty if censorship continues. Certain readings, and types of entertainment have already begun to disappear one by one. It is understandable if one person does not agree with the material being placed into these books, but why should they ruin the entertainment for everyone else? From my own experience,

people in my elementary school were not able to enjoy reading a popular series of books at that time period. Since I went to a @CAPS1 school, the priest at the corresponding church during that time decided he did not agree with the content in this certain series of books. As a result, he took charge and made the staff of the school remove those books from our school library, and no student was allowed to come to school with one of those types of books. If it had been up to him, he would have decided to go ahead and take out all those books from everywhere in the world. Just because one individual does not agree on the content of that book, they should not be able to have the power to banish the lovely leisure for the rest of the population. Authors and artists of books, movies, and music have the freedom to put into them whatever they choose. It should not be up to their audience to decide whether or not it is appropriate. The concept is quite simple; if the reader or viewer does not think they would agree with the work, then they should not spend their time to read or view the pieces at hand. Just because they might not completely think what the content entails is necessarily appropriate, someone else might enjoy it. Censorship is wrong for this very reason. The creators of their work are most likely proud of what they have accomplished and would like their audience to enjoy it to. The audience they are trying to appeal to @MONTH1 not have the same taste in style as someone who the work was not necessarily meant to have their own opinion on the matter. Books should not be able to be taken out of libraries because what one person might think is not appropriate to be placed into public, another person @MONTH1 enjoy thoroughly. Likewise, if the content of a work of literature does not appeal to an individual then it should just simply not be read by that person. As humans, there is the freedom of choice as to what people would like to read, and what they would not like to indulge in. So make the correct choice in deciding what you want to read, and do not ruin the enjoyment for many others. In a great deal of different types of literature censorship is touched on by the authors. For example, in the popular prize-winning novel, @CAPS2 @NUM1, books are burned, or 'censored' because they contain information people should not be aware of in that period of time. However, in today's world books are a major type of entertainment and are important in the knowledge of everyone. Books provide so much information on almost every subject known to human-kind that it would be such a dramatic loss if now books were burned if caught reading one. Paterson does point out that everyone has a right to their own opinion of this matter, but if people do not take the right approach to solving this situation, there will be no books left on library shelves for several generations after to enjoy for themselves. Every individual has their own right to be able to read books and absorb all the wonders and knowledge they contain. As a result of the growing awareness of censorship in today's libraries, people @MONTH1 never be able to enjoy certain types of books, movies, music, and magazines. From my own past experiences on this situation I know how wrong it is to take away someone's own privilege to enjoy types of literature. People should not have a say whether something is appropriate or not to be taken out of libraries. If the individual does not simply agree with the specific content of the work then they need to accept it and move on instead of causing millions of others to not enjoy it. Also, from different types of reading, censorship has definitely become a serious issue, but it should be abolished. Keep the books that are on library shelves now for many generations to come and enjoy for themselves

Do you use a computer? Is there one at your house? Well, the average household owns two computers, but this isn't good, @CAPS2 computers are taking valuable time away from hobbies, nature, and real-life. First, computers take time away from hobbies and friends. Some of my friends spend @NUM1 hours on the computer a day that they could be playing. a sport or hanging out. Also, the computers become the center of their lives. People ask me " @CAPS1 weren't you online @TIME1?" and i answer "@CAPS2 i have a life that doesn't revolve around @CAPS3." @CAPS4, the computer takes time away from nature. People dont acknowledge the beauty of the outdoor. Now that our lives are so orderly, we need the wilderness even more than @CAPS2 it helps us to appreciate ourselves more and appreciate how special our planet computer take all that away! Third, computers take us away from real-life. Some people dont know how to have a face-to-face conversation, they only know how to communicate by email or @CAPS5. I acknowledge that getting away from real life can be relaxing but some people dont know which side the stomp goes on a letter. It @MONTH1 old-fashioned, but i believe people put their heart something you can't do by email. In conclusion, computers take time away from real-life, nature and your hobbies. Plus, you can get arthritis in your hands if you type to much.

In the memoir of Narciso Rodriguez, @CAPS1 created a certain mood. Narciso Rodriguez created a gentle mood that stayed constant. @CAPS1 tells how his parents "always kept their arms and their

door open to the many people we consider family." Which means @CAPS1 probably grew up in a life without very much violence. @CAPS1 also says that @CAPS1 "will always be grateful for their love and sacrifice." @CAPS1 wants his parents to know that @CAPS1 loves them very much and lets them know by thinking them. Lastly @CAPS1 @CAPS1 says @CAPS1 "will never forget how my parents turned this simple house into a home." The sense of gentleness stays throughout the whole memoir because @CAPS1 is always saying the good things about his life, not the bad.

The setting in ?Rough Road Ahead: Do Not Exceed Posted Speed Limit? @CAPS1 the cyclist's physical and mental state. There are negative and positive effects for each state. The physical effects of the cyclist because of the settings all apparent throughout the story. For example, the cyclist reaches @PERSON2 and @PERSON1's Fish Camp, he is able to hydrate once again. The positive effect makes the cyclist healthy and safe once again. The setting mentally, @CAPS1 the cyclist very substantitally. This can be seen when the cyclist in the comfortable camp around in @LOCATION1. He feels happy in this area. This positive effect prepares the cyclist to go on the trip to Yosemite. Also, when the cyclist reaches the ?Ramshackle @CAPS2, several rusty pumps, and a corral, ?he feels troubled. He is negatively affected mentally by the little amount of available water. In addition, the cyclist felt "sad" and "hopeless? when cycling in the Dry, arid terrain. The cyclist is in the worst mental state in this place. Finally, the cyclist felt relieved upon seeing the fish camp. He describes the feeling by saying that his trouble are now ?behind? him. Settings positive effect in this instance changes mental state from negative to positive. Setting was the main factor in deciding upon the cyclist's physical and mental state. Setting @CAPS1 the cyclist's physical and mental state in positive and mental states almost equally in the story.

In the excerpt "The Mooring Mast" by @ORGANIZATION2, there were many challenging obstacles that the builders of the @ORGANIZATION1 as they were attempting to allow dirigibles to dock there. Al Smith, the four-term governor of New York was determined to outstrip the Chrysler building by making the Empire State Building much taller. He had goals where the building "would be equipped For an age of transportation that was then only the dream of aviation pioneers". The first obstacle involved their expanded use in New York City, which was the lack of a suitable landing area. Al Smith, however, saw it as an opportunity to have a a mooring mast added to the top of the building would allow dirigibles to anchor there For several hours for refueling or service, and to let passengers off and on". Al Smith's ambitions to enhance the building's height encouraged him to overcome this obstacle. Another problem with this however, was actually constructing the mast which led to a new obstacle. Over sixty thousand dollars' worth of modifications were done to the Empire State Building because they couldn't have a thousand- foot dirigible moored at the top of the building. If the dirigible was held by a single cable tether, it would add stress to the building's frame. Even though this was an obstacle, the modifications to the building had adjusted this problem, and the builders were able to create the mast. As the progress of the Empire State continued, more difficulties kept arising which made the goas for Al Smith much farther away. Not knowing the fate of the mooring mast on the Empire State Building, the builders realized afterwards that the mast's purpose became obsolete. The issue here was mainly safety which was that "most dirigibles from outside of the United States used hydrogen rather than helium, and hydrogen is highly flammable". They noticed after the mast's construction that it could have been a tragedy to have a dirigible go in flames above the densely populated city. Another important obstacle that interfered in attempting to dock dirigibles above the Empire State was nature itself. It was stated that "the winds on top of the building were constantly shifting due to violent air currents". The builders knew that weighing

down the back of a dirigible would be unsafe because of the pedestrians below. Even with all these obstacles, the builders of the Empire State Building continued to try to allow dirigibles to dock there, but over time the idea had faded away and they basically gave up on the project. Al Smith's goals were left uncomplete because of the challenging obstacles, but in the end, he did manage to establish the Empire State Building as the tallest in @ORGANIZATION5.

'''text

Saeng promises herself that "In the spring, when the snows melt and the geese return and this hibiscus is budding, then I will take that test again." The hibiscus is meta phorica to Saeng for her childhood. Evidently she grew up in Vietnam and moved to the @LOCATION2. She misses her homeland, and all the flowers remind her of her homeland. She is overwhelmed by all the memories that she breaks down and cries. Change is a difficult thing to overcome or adjust to, especially moving to a foreign country. She has to cope with it though, and by planting the winter hibiscus is a way of coping. She knows that she will eventually adjust to the major change for she realized, "that many of the things she had thought of as strange before had become almost familiar to her now." She promises herself that she will retake the drivers test when the hibiscus blossoms because like Saeng a flower changes also. When the hibiscus finally overcome the cold , dreary winter months and blooms, Saeng will know she is ready to take the test again for that flower can also symbolize her going through changes. The geese in the story also symbolize changes, they have to migrate south in the winter to avoid the cold but return home when its warm enough. Like Saeng, she will avoid the test in the winter but in the spring when she feels comfortable.

The older men gave him directions that were acctully really bad. Nature wasn?t on is side that?s for sure. First of all he ran out of water because of the heat. Secondly a snake blocked his path and he didn?t want to tempt it. Thirdly he became so overheated that it was possible for him to suffer a heat stroke in the middle of nowhere. Also he kept going to abandoned buildings. It was so bad that the stone relied on for his thirst got stuck in his throat, he was then lead to a bait shop that was absolutely in the middle of nowhere and he had no way of getting home.

'''text

In the excerpt the @CAPS1 were faced with multiple issues on their theory. It took lots of time for people to begin realizing reality. For example, Airships had a law preventing them from getting to low to urban areas. Also they realized major would play a negative role. Wind would cause the @CAPS2 to swing around all Docked. They thought to way down the rear of the ship, but soon realized that is unsafe over many people below. They had heard of a @CAPS2 in New Jersey was Destroyed by fire, Due to its hydrogen, Also unsafe in New York with such a @ORGANIZATION1 population. Overall they began to realize saftey issues and how unpractical it was to do all of this.

'''text

Dear Readers' @ORGANIZATION1 the Local Newspaper, I am almost certain you interact daily with computer. You use computers to write, play games, look at pictures, and print work out. There are dozens @ORGANIZATION1 practical for computers but nowadays, many people, especially children, are using computers excessively. This unnecessary usage @ORGANIZATION1 computers can cause obesity, expose children to inappropriate things & destroy family time. Readers, hear my argument and by the end @ORGANIZATION1 the paper you will surely agree with me that computers are detrimental to society. Have you ever made a @ORGANIZATION2 @CAPS1's @CAPS2 to lose weight? It's not uncommon for one to make such a goal. According to the @ORGANIZATION2, @PERCENT1 @ORGANIZATION1 adults make their @ORGANIZATION2 @CAPS1's @CAPS2 to get in shape, exercise more or just lose weight. We've all seen the commercials on @CAPS4 that encourage you to "@CAPS5 @CAPS6!" @CAPS7 you too can "lose weight in just one week"! There are also plenty @ORGANIZATION1 entrepreneurs out there that want to convince you to buy their exercise product @CAPS7 you can develop outrageously large muscles in "no time at all". But do all these & exercise plans really work? According to a study done by the @ORGANIZATION1, the largest cause @ORGANIZATION1 obesity is actually computers! The students at @LOCATION1 had one group @ORGANIZATION1 people try a regular commercial diet plan & another group @ORGANIZATION1 people do exactly what they've been doing... Except their computers. They found that the group who from computer use lost nearly @PERCENT2 more weight on average than the group on the commercial diet! Nothing is causing

obesity in @LOCATION2 them computer. A familiar day for an average child in @LOCATION2 goes like this: go to school, home on the bus, use computer eat dinner, do homework, go to bed. Unfortunately, these happens @NUM1 days a week & the computer time is eating up none other than the exercise time. Readers please, try avoiding you computers for just one week, and you can forget those jet plane. Another negative @ORGANIZATION1 computers is that it not only affects an individual but possildy an entire family! Many children can go an entire day without sitting down & talking to their parents. My friend @PERSON1 often hope from school and goes straight up to to use his laptop without even saying hello to his parents. Computers have become nearly an addiction to most teenagers. @PERCENT3 @ORGANIZATION1 teens in @LOCATION2 say they use computers daily & @PERCENT4 say they have trouble communication with their parents. There is a direct connection between the lack @ORGANIZATION1 communication at home for teens & computer usage. Teens become in their society lives and become to their computers. What they don't notize is that they're totally forgetting about their families! I know I've made the mistake @ORGANIZATION1 becoming too attached to socia networking to remember my family but luckily I have a stable family environment. Some teens don't have that luxury. Computers have the ability to destroy parent-child relationships, don't let that happen to you. Your children are without a doubt, through, the ones a by this technical revolution the most. From the time they were your children probably had a keyboard at their fingertips. Do parents ever realize what they're getting their children into when they teach them how to use a computer though. Children as young as @NUM2 or @NUM3 years old are exposed to profamily, & vulgar pictures on the web on supposed "safe sides". Do you even realize who your child's talking to on the computer? With all the @CAPS8's & emails flying around, you could be talking to a complete stranger without-even knowing. An enormous part @ORGANIZATION1 who your child become & the values they hold is a product @ORGANIZATION1 what they were exposed to @ORGANIZATION1 a young age. Bring a computer to your kindergarttrer & you can probably guess what they'll grow up with. No matter how much you think or believe on the safety @ORGANIZATION1 computer, you cannot argue with the fact that computer expose children to adult content very early in their lives. @CAPS7 do you look at your computer differently @CAPS6? Faced with the concerns @ORGANIZATION1 lack @ORGANIZATION1 exercise, separation @ORGANIZATION1 families & mappriate natural children do you really want your children, or even you for that matter, using a computer daily. Think a head @NUM4 years from @CAPS6. Will you say "I wish I used my computer" or "I wish I spent more time". In the end, the choice is really up to you.

No i dont hink that should happen that would be stupid and im sure alot of people will disagree with it. one reason is because adults like all of that stuff. And if they were doing this because kids keep geeting into them. then just get a door that says @NUM1 and older and put cameras up. If kids parents complain then at lest you can say that its all in one room and no kids aloud. this shoudnt be a big deal if your a kid you are going to have to be round all the time when you grow up. So you might as well get used to it. it is a big deal if your cursing all the time but most kids know better and know not to do bad stuff. when i was growing up i was around all that stuff and i think i turned out alright

'''text

Shafts of light escape through fogged windows casting a shadowed glare upon the surface of the table. A tremendous sign hovers on a wide oak shelf that borders the entire dining area. @CAPS16 read's "@CAPS1's" in great letters buried under decades of dust. My eyes dance among the plethora of mismatched antiques and statues strung throughout the room easily filling every crevice. These objects form a family of outliers, each individually unique belonging @CAPS15 the restaurant. Huge posters of All-@CAPS2 athletes tower among @NUM1-inch flat screens while an acrid scent of molded wood and fermented beer lingers. Numerous bras fall from the ceiling of the bar that sits next @CAPS15 the entrance. The sound of crunching echoes in my ears as waitresses maneuver over fallen peanut shells. That's @CAPS4 sets this place apart from the others. The entire floor is littered with barrels of @TIME1's broken shells and mashed peanuts as @CAPS16 is custom for the customers @CAPS15 throw them on the ground. Of course there's my family; a vivacious group of five squeezing our round frames into a booth that comfortably seats four. We seem @CAPS15 mesh quite nicely with the crowd of miscellaneous objects dressed in our 'DATE1 @CAPS3' attire of skirts and dress suits. Distracted, I busy myself in the menu browsing for something with a little zest and a lot of calories. A loud smashing noise breaks my attention and I slide the newspaper style menu below my eyes. Across the table sits my grandmother; a petite old lady standing proudly at @NUM2 who devotes her free time in attempting stand up comedy. I study the glass jar of ketchup she's holding and watch her pound the corner

on a single peanut. The shell cracks open and @ORGANIZATION1 picks out the nuts sweeping its kernels onto the floor. I giggle @CAPS15 myself surprised at @CAPS4 limits this old lady is willing @CAPS15 go @CAPS15. She proceeds @CAPS15 repeat this process with ten more peanuts until the entire family has stopped in curiosity. Looking up, @LOCATION1 pauses with the jar suspended in her hand. "@CAPS4? I'm just trying new ways of cracking open the nut." @LOCATION1 exclaims pausing for a comical response. With no reaction we resume position contemplating our meal choices. Minutes later a hefty waitress reeking of drugstore perfume and @TIME1 nights hangover sets down glasses of water and drags off sluggishly. Raising his glass, @CAPS5 motions us @CAPS15 follow. "@CAPS6!" @CAPS7 calls clinking each of our glasses in turn. "@CAPS6! And @CAPS6 @CAPS15 cherry people!" @LOCATION1 pitches in. "@CAPS9 @CAPS10!" I shout automatically. Immediately my parents chuckle because my grandmother has never been funny. @CAPS16's a joke that nobody in the family laughs at @LOCATION1's comments but herself and that's how @CAPS16 remains. Years ago, my brother deemed her jokes the "@CAPS9 @CAPS10" because she poses as a comedian but truly isn't. From then on, each time @LOCATION1 would crack a "joke" someone was quick @CAPS15 respond with yelling "@CAPS9 @CAPS10!" @CAPS15 this day, she has neither improved nor given up daily opportunities @CAPS15 attempt @CAPS15 win over her audience. In quiet defeat @LOCATION1 chuckles @CAPS15 herself and focuses down on the menu. Seconds later she's back in the ring for round two. "@CAPS16's noon. So are we having breakfast or lunch? Or should we have..brunch?! I'm dying here just laugh already," she pleads. For a moment we all just stare at her. Innocent eyes gaze back; the predator calmly sits awaiting the move of its prey. Then, as if a switch had been flipped, we eye each-other and the ribbon is cut. Tea party giggles erupt into hoarse cries as rolls of thunderous laughter echo through the room. I hand my mother a napkin which she uses @CAPS15 dab jubilant tears. The thick wooden table shutters under the pound of my father's fist slapping the surface in hysteria. I laugh so hard my gut aches and yet I cannot understand why everything is so funny. All the while @ORGANIZATION1 sits in pure delight, tickled by the success of finally earning a sincere response @CAPS15 her notorious off-the-cut "jokes." @CAPS16's a wonder we aren't thrown out of the restaurant. Customers in surrounding booths peer over the edge of their bench eying us with distaste. However, this isn't the first and certainly wouldn't be the @TIME1 time my family causes a scene. Plain yet obnoxious jokes is a loosely run comradery in our family that always finds its spot in our books of lasting memoirs. The remainder of the meal was spent in bursts of giggles and we were more than kindly shown out the door once our meal was finished. Its when you break into hysterics for no monumented reason and can't get through retelling @CAPS16 someone else who doesn't find @CAPS16 nearly as humorous.) @CAPS16's those insignificant moments in life when we're reminded of who we are and the bonds we share. Laughter is a connection, a form of love that cultivates within society and in families with grandmothers such as mine, every "@CAPS9 @CAPS10" is worth @CAPS16.

The common phrase 'knowledge is power' accurately paints the situation at hand. Through censorship in libraries, which are meant to allow free access to all media-related materials, we take away the opportunity for people to empower themselves through knowledge. The reasons for not censoring media in libraries are numerous and include, but are not limited to, unconstitutionality of censorship, the lack of proper definition for 'offensive', and the contradiction censorship poses to the core of what a library is. The first, and most blatant, reason for not allowing the censorship of materials in libraries is the unconstitutionality of the matter. Freedom of speech and freedom of press are both protected by the constitution upon which our country was founded. Censorship of said materials will effectively undermine both of these rights. Authors, illustrators, journalists and the slew of other individuals who compose the materials available in libraries are exercising their right to free speech through their works. They are constitutionally protected in the things they say. Notice that @CAPS1 have a right to free speech and not a right to free speech so long as no one is offended. The freedom of press is the means by which they share their ideas and concepts with the world. They are utilizing their free speech by means of press. Censoring library materials would be limiting the means by which artists can share their ideas with citizens of the @LOCATION1. This would be a clear failure to uphold the rights of the citizens. For this reason, we cannot censor libraries. The constitutional concept of equality of man plays into the situation as well. There is no adequate legal definition of 'offend'. People could be offended by something as serious as a personal attack on their beliefs and personal entity or something as light as a personal distaste for certain mindsets and ideas. So, because all men are equal, we would have to respect the 'offense' taken by all people and to all degrees. This leaves every single work of art, whether it be a book, movie, magazine or any other form provided by libraries, open to the fickle definition of offensive and vulnerable to the personal feelings of every individual. If said offense taken by individuals to works is able to mark a work as 'offensive' and thus make it open to removal from libraries, we are effectively allowing citizens to undermine the rights of other citizens. This is something that cannot be allowed in our libraries. The final core issue is the essence of censorship versus the essence of a library. Censorship is meant to create a politically correct and non-offensive environment through the limitation of exposure to materials. Libraries, however, are meant to allow public access to works that stretch and challenge knowledge, beliefs, notions and all ideas held by people through the works of others. Censorship cannot be implemented without a clash with the essence of a library's purpose. If censorship were to be enacted, a library could not provide new information if someone else did not like what was being taught. A library could not provide works that challenge and stretch individual beliefs if someone was offended by the means by which the stretching occurred. Pre-conceived notions could not be defeated with the presence of factual knowledge if someone did not like the truth. In all of these ways, and many more, a library's core ideals and purpose could not be upheld with the induction of a system of censorship. All in all, we can see that censorship could only hope to destroy the system libraries abide by. The constitutional rights of citizens would be infringed upon, the fickle nature of humans and the lack of definition for 'offensive' would allow people to undermine the rights of others, and the essence of what a library really is would be ravaged. We cannot, as @CAPS1 with rights, employ a system of censorship

In an attempt to build a dirigible destination, in the Empire State Building, the architects had to deal with @CAPS3 problems like a dirigible mishap or simply nature itself. @CAPS3 problems like a blimp crash would be costly, lives would be lost in the densely populated city and the explosion could destroy buildings around and to the Empire State Building itself. To prevent this from happening the Government had already made a law that banned flying aircraft from going too close to urban areas. To build this @CAPS1 the architects would have to break laws or bend rules. Another conflicting idea, that disrupted, plans for a dirigible docking station would be nature, harsh winds could easily sway a blimp, and swaying could cause the blimp to puncture on a nearby building, "Even if the dirigible were tethered to the mooring mast, the back of the ship would still swivel around the mooring mast." (@CAPS2 @NUM1) The swiveling as mentioned earlier could hit near by building and harm civilians. The @CAPS3 problems and laws that kept the Mast from being created should have been realized before, the idea will never be possible.

In many real-life situations, nature or a setting can be the biggest hindrance in succeeding, or even surviving. For example, the cyclist with stood the blozing heat of the sun as he pedaled through what seemed to be the @CAPS1?s living room: Dry, desolate, and extremely scornful. ?Wide rings of dried sweat circled my shirt, and the growing realization that I could drop from a heat stroke on a gorgeous day in June.? @CAPS2 and depicts the intense heats of the desert. Another feature in the setting was the every hanging hills and steps though pedaling down the hills was an easier task, traveling up the hill, as well as maneuvering the thirsts and bends served as a direct conflict. An example, ?with what I believed was my last burst of energy I maneuvered a setting affect a situation is ultimately, the cyclist reached his destination is great relief. But the biggest hindrance was along his setting.

One day @CAPS17 I was having trouble trying to cope with some very big changes in @CAPS13 life, I seeked the help of a friend. Usually @CAPS17 i'm having a bad day I @CAPS14 keep to myself. This was an occasion @CAPS17 I need someone else there to help @CAPS2. @CAPS17 I went @CAPS5 met with @CAPS13 friend she tried all she could to cheer @CAPS2 up but nothing was working. @CAPS6 she said "@CAPS1 hear a story?" @CAPS2 wanting to hear anything that would take @CAPS2 out of this slump I was curenly in said "@CAPS3, @CAPS4 @CAPS12 think it will help."@CAPS5 @CAPS6 she began. "The other day @CAPS13 family @CAPS5 I went grocery shopping. We were gone for probably four hours. I stopped her right there @CAPS5 asked her how this was relavent to making @CAPS2 feel better @CAPS5 she said "The more details the funnier it is." I told her to continue. She continued, "@CAPS6 we got home @CAPS5 the parents started unloading the grocerys. While they were doing that @CAPS13 sister @CAPS5 I were in the living room teaching our dog how to sit, lay, shake, speak, @CAPS5 roll over. Everytime she did a trick we would give her half a dog treat. @CAPS17 the parents were done putting the grocerys away they walked in the living room @CAPS5 we showed them the tricks we had taught our dog, they had yet to see them. After we showed them all @CAPS13 father had to say was "@CAPS7 @CAPS3 @CAPS12 put the dog treats up @CAPS6 she doesn'@CAPS11 get into them." I replied with a simple "@CAPS8." @CAPS6 the parents said they would be back that they were going to get pizza because they didn'@CAPS11 want to cook after a long day of shopping, @CAPS5 @CAPS6 they left. While they were gone @CAPS13 sister @CAPS5 I straightened up the living room @CAPS5 continued to train the dog. @CAPS17 the parents got back we all sat @CAPS5 @CAPS5 began to watch @CAPS11.V. @CAPS5 eat our pizza. After @CAPS5 while @CAPS17 everyone was done eating we were still in the living room @CAPS5 @CAPS13 sister @CAPS5 I heard @CAPS13 dad in the kitchen complaining about not being able to find the cookies they @CAPS14 bought. I looked at @CAPS13 sister @CAPS5 said "@CAPS12 know what would be funny? @CAPS4 dad thought the dog treats were cookies @CAPS5 ate one." @CAPS13 sister giggled. Our dad came stomping into the living room @CAPS5 threw himself on the couch, acting like a four year old boy who @CAPS14 got his game taken away. We began to laugh @CAPS5 our dad looked over @CAPS5 scolded us, then looked back at the @LOCATION1. Then out of nowhere @CAPS15 said "I found them." Or what @CAPS15 thought was them. @CAPS15 reached for the dog treats on the coffee table. @CAPS13 sister @CAPS5 I didn'@CAPS11 dare speak a word. We watched him. @CAPS15 looked at the @ORGANIZATION1 @CAPS5 reached his hand into the bag of dog treats @CAPS5 pulled one out. @CAPS15 looked at us @CAPS5 we looked away momentarilly. Then our eyes fixed right back on him, beyone our control. We @CAPS14 had to watch. @CAPS15 looked away to the @LOCATION1 again @CAPS5 put a whole dog treat in his mouth. @CAPS15 began to chew. Then @CAPS15 slowed down his chewing @CAPS5 tilted his head to the side, @CAPS14 like a dog would. What a coincidence. Then it sounded like @CAPS15 choked on a piece of it @CAPS5 @CAPS15 began to cough. @CAPS15 spit dog treats all over the back of @CAPS13 moms head who was sitting on the floor. @CAPS13 sister @CAPS5 I began to laugh histariclly beyond our control. @CAPS13 dad was @CAPS14 sitting on the couch with a straight face, I swear we could see the smoke coming out of his ears. @CAPS15 began to yell about how we should have put the dog treats up @CAPS6 this wouldn'@CAPS11 happen but in mid sentence, @CAPS15 @CAPS14 couldn'@CAPS11 help it anymore. @CAPS15 began to laugh. @CAPS6 we were all laughing, then we look at @CAPS13 mom who was still sitting on the floor in still in shock because she got sprayed with chewed dog treats. We could stop laughing, @CAPS6 then she began to laugh." @CAPS17 she told @CAPS2 this story @CAPS5 laughed @CAPS6 had I cried. Then I realized "All @CAPS12 need is a little laughter in your day to brighten your life."

In this memoir, the author touches upon serious facts while giving the memoir a fun and happy mood. For example, in paragraph @NUM1 they talked about how others who aren't even related to them come to do different activities with them, while still touching upon a serious topic about how his real grandparents weren't allowed to leave Cuba until 1970. The author also shows how even though they struggled and went through hardships in their home in the @LOCATION2, they were still able to keep their Cuban culture going along with the music they played and food. He portrays a mood that shows you can be happy no matter what the hardships you endure.

I play hockey. I am a goalle. A good goalle is always paitient. On my old hockey team me and the other goalle faced lots of @NUM1 on @NUM1 shots. Most of the @NUM1 on @NUM1 shots didn?t matter but a few of them did, and they were the hardest to stop. My team had never lost a game but we had a few very close games. In one of the games, the score was @NUM1 to @NUM6 and my team had the lead. It was towards the end of the game and they had a @NUM1 on @NUM1 against me. The shooter was skating in from the side and he cut across the middle of the ice. It was tempting to go down but I stayed on my feet. I waited for the shooter to get to a point where he had no place to go and he shot and I stoped it. That was even of the only shots of the game and I stoped it.

'''text

The author chose to end the story this way for several reasons. Some of the reasons is that it creates a feeling of hope in the reader, tells us we always have another chance and the importance of persistence. The ending paragraph creates a feeling of hope since it shows how everything will return and others will be another chance. The author chose to put this in the text since it creates a happy note to end on and give the reader happiness of knowing there is hope. Another reason the author chose to end the story with this paragraph is that it tells the reader that you always get another chance no matter what you do. The author wanted to impart this on the reader since it is an important lesson to know. The ending also tells the reader that persistence is very important in life and almost essential to live. The author shows this by talking about the snow melting, the geese returning and the flower blooming which are things that happen constantly and almost stop because they refuse to give up and die. Therefore, the author chose to end the story with this paragraph for several reasons. The author chose to end it this way since the paragraph gives a lot of hope to the reader and gives the idea of a second chance. The author also chose to end with this paragraph since it has several analogies to persistence which is vital in life.

The library is known to be a place full of dreams and imagination. For some, the library is a sanction where you can escape reality and dive into a book where anything is possible. the library is full of many books for all ages. Therefore, books that are classified for one age group, @MONTH1 not be appropriate for another age group. This is where a problem occurs. If the library chooses to keep books in it that are only appropriate for certain ages groups, various problems can occur. The three main issues with this situation are young children can access magazines they have no buissness looking at, some articles or books can be found offensive to some races creating an uproar, and also events and instances played out in books @MONTH1 not be appropriate for all age groups.We have to think about books we have read, and contemplate if we would want others to read it as well. Young children are often daily visitors of the library. Most run around the library getting into any and all books or magazines the happent to come across. This is not always good. Int he library there are many magazines that are meant for adult eyes only. My family has had an experiance with this sort of situation before. My mother , brother, and myself visited the library one evening. While my mother and I searched the library chaotically, my younger brother found hissself, searching the magazine rack for something to keep his mind occupied. Well his mission was accomplished. On his search my younger brother had found himself a sports illustrated magazine. Inside there were pictures revealed that my mother was not to happy about my brother seeing. Instances like this happy everyday int he local library. staff members should think to put revealing works up to where the younger generation can not find them. Throughout the library, there are many books dealing with past historic events. Although many find these books helpful and interesting, some find these books to be quite offensive.ome races have undergone painful events in history. Many of those people do not want

to relive the painful past experiences. It is in my opinion that the library should oblige by the people, and take in reference how different people feel about certain books. When i was a young girl in elementary school, I remember doing a whole unit on slavery and the underground railroad. While studying the unit, we were assigned a research assignment over the lesson. I choose to visit the library in search for books I could use to gather more information. While searching the library, I came across a book that my mother and I felt should not of been where younger people could see. the book enclosed many horrible acts against black people. This is a book that at my age, I should of never came across. For me reading books helps me escape the real world and catch a break. When I relax and enjoy a good book, I can't help but feel like nothing inthe world can touch me. Although I love reading books, I don't like when I come begin reading a book then have to halt because the book reveals events that I shouldn't be reading. One book I read, was definitley not appropriate for me. Although I found the book , in the young adult section, the book I read revealed a young girl encoutering many rapes and beatings. Now that I look back , that is a book that i might enjoy now, @NUM1 years later, but I don't feel i should have encountered that book then. What books should and shouldn't be encountered in the library is surely a never ending feud. Many believe that books should be taken out if they are not appropriate for all audiences. I think that if the inappropriate books that should not be viewed by all ages, were put away to where the younger audience couldn't get them, then the never ending feud might be able to be put to rest

Dear @ORGANIZATION1 @CAPS1, Computers have advanced our world so far into the future that practically everything is just a click away. Experts are awed that over the years, computers have helped billions of people get jobs done faster and smoother than ever before. Technology has helped doctors find new cures for patients, and diagnose their sicknesses in a more advanced way. Thousands of professions require the limitless knowledge of the internet, and computers continue to advance and redefine our way of living. Furthermore, kids of all ages benefit from modern computers. As technology becomes more user-friendly, children have adapted to computers giving them answers to all of their questions. As a student at @ORGANIZATION1, I have found that computers are vital in everyday assignments. Essays are now typed and not handwritten and projects are displayed on flash drives, not posterboard. Those advances have shaped our lives, and made everything much easier. Also, foreign places become closer to home, when computers allow you to virtually visit hundreds of different countries. With modern technology, the world is better connected and united. In addition to students, doctors also greatly benefit from computers. Technology has re-shaped the medical world dramatically with x-rays, @CAPS2's, surgeries and medicines. Amazingly, computers allow doctors and nurses to look at patients in a whole new way. Hospitals organize all records digitally to help give the right treatments patients. @PERSON1, the head surgeon at @ORGANIZATION2 says, "@CAPS3 technology, our @ORGANIZATION2 would be useless. We wouldn't be able to do anything." @CAPS4 @PERSON1 is well-spoken, he makes a very important point. Computers are the building blocks of our medical world. Scientific studies have shown that the internet has brought people closer than ever before. Families separated by thousands of miles now have the ability to email, chat or even video chat with far away relatives and friends. Email has especially played a huge roll in our society, so as to help millions of people communicate when needed. Infact, over @NUM1 million jobs rely on email to communicate important business information. @CAPS3 the aid of technology, our economy would rapidly as communication countries failed to exist. Computers are essential to our culture. I strongly urge you to consider my opinion on the benefits of modern technology and think of all the people computers have helped. Our culture is now bigger, better, faster and stronger, thanks to the help of technology today. Knowing this, I vehemently suggest you educate others in the benefit of technology and play your part in advancing our way of living.

The original plan for the Empire State Building was to be tallest building in the world, at @NUM1 feet. Everything was going well until the competition. The Chrysler Building, threatened to steal the title. When Al Smith announced that he was going to put a mooring mast at the top of the Empire State Building, this obviously changed the architects designs. "The architects designed a shiny glass & chrome-nickel stainless steel tower that would be illuminated from the

inside, with a stepped-back designn that imitated the overall shape of the building. The rocket-shaped mast would have four wings at its corners... and would rise to a conical roof that would house the mooring arm." (L?sted). Two months after the workers started with the new plan, the celebrated because the finished framing the entire building "The Empire State building was destined to never fulfill its purpose, for reasons that should have been apparent before it was ever constructed. The greatest reason was safety." (L?sted)

The features of the setting greatly effected the cyclist. He was riding along on a route he had little confidence would end up anywhere. That being the first time ever being on that rode and having only not of date knowledge about it made the cyclist rework. The temperature was very hot, where was little shade, the sun was beating down on him. The route was very discouraging .all the cyclist wanted wanted was water and the route kept touenting him with false hope. At the first town he noticed a water pump, but all he could get of it was sludge and water that tasted like battery acid. Next he came to a deserted old building that approved to be an old bottling factory for Welch?s grape juice. The cyclist would appear to be closing in on something to drink, but be left with nothing.

Laughter. Something everyone does. Its natural, organic, normal. They say children laugh more than adults, maybe that's @CAPS6 keeps them children. They can still let that deep instinct to enjoy themselves be expressed in bursts of happy noise. Laughter is always unique to every person. Some have musical laughs, others have deep belly laughs. Then there @CAPS10 those or snort or snicker, the kind of laugh that makes @CAPS8 laugh because @CAPS8 hear it. Those @CAPS10 my favorite. Someone once said, "Laughter is the shortest distance between two people" and I couldn't agree more. Laughing with people has been the greatest influence in my relationships with my friends. I have five girlfriends that I would not be able to live without. They support me, love me, and get me to be bold and get out of my comfort zone. There have been many sleepovers where at two in the morning all @CAPS8 here is the laughter of all of us at some shocking @TIME1 confession or horror at the "would @CAPS8 rather?" someone just came up with. One @TIME1 in particular was especially funny. It was last @DATE1 and we were sleeping on @ORGANIZATION1's porch. It was a spectacular @TIME1, the stars were out the air was cool but comfortable and a meteor shower was happening later on that evening. @PERSON3 started the conversation with her favorite catch phrase, "@CAPS1 guys, hows life?" We all @CAPS16 because if @CAPS8 @CAPS10 around @PERSON3 for more than an hour @CAPS8 will here this saying a @CAPS2 times. "@CAPS3 as five minutes ago," I replied. "@CAPS4 guys my life has completely changed," said @PERSON1 sarcastically. "@CAPS5 really?" @LOCATION1 asked, her little body curled up in her sleeping bag, "@CAPS6 have @CAPS8 had a personality flip, @CAPS11 @CAPS8'@CAPS20 now blond and stupid?" "@CAPS7." @PERSON1 said sarcastically, rolling her eyes, a very @ORGANIZATION1 gesture. We @CAPS16 at the ridiculous mental picture of "the brain"being stupid. "@CAPS8 guys want to play would @CAPS8 rather?" @ORGANIZATION2 piped in. I had thought she was asleep by now. All I could see was her red hair covering her face. "@CAPS9!" yelled @PERSON2, "I can't handle my mind being filled with horrible mental pictures!" she buried her face in her pillow trying to block the images. "@CAPS10 @CAPS8 sure? I have some new ones." @PERSON1 said with her best evil voice, "@CAPS11 would @CAPS8 rather have to..." "@CAPS9!" we all yelled together and the laughter ensued. "@CAPS13 or @CAPS14?" @PERSON3 suggested. An unintelligible noise came from @ORGANIZATION2's pillow. "@CAPS6 did @CAPS8 say?" I asked. She raised her sleepy eyed face. "I'@CAPS23 too lazy, and unless the @CAPS14 is to be the first one asleep then I'@CAPS23 not playing!" she dropped her head back onto her pillow. "I agree," @LOCATION1 added, "I'@CAPS23 too lazy." "@LOCATION1 it would take @CAPS8 four hours just to get out off this porch cause @CAPS8'@CAPS20 so @CAPS21." @CAPS16 @PERSON1. "@PERSON1 I'@CAPS23 not @CAPS21. I'@CAPS23 @CAPS17!" "@CAPS5 just accept it @LOCATION1, @CAPS8'@CAPS20 @CAPS21!" "@CAPS9 @PERSON1 I'@CAPS23 @CAPS17!"We continued @CAPS11 this, bantering back and forth till slowly people began to fall asleep, drifting off in the cool @TIME1 air. I was the last awake, and as I watched the meteor shower I had a sudden epiphany. My life was pretty awesome right now. It was @DATE1, @CAPS9 school, @CAPS9 stress. I was laying on a porch watching a meteor shower listening the @TIME1 sounds and feeling perfectly safe, and I had the best five friends I could ever wish for. We

joked and @CAPS16 with each other, but this is the first step to being so comfortable with people that @CAPS8 can tell them everything. Laughing with someone breaks the ice, it brings us closer together. Laying there I suddenly realized that because of all of our joking I felt comfortable enough with these girls to tell them just about everything, and I wanted to. I had never felt @CAPS11 this before. That I could do anything because there were five people that had my back through anything. I smiled to myself and as I closed my eyes I imagined all of the laughter I would get to enjoy with these friends.

One @MONTH1 subject the censorship of library content in certain places and times, whether fictional or not, to his or her own opinion. I personally disagree with the concept. The facts point out that society fears the dystopia predicted by publications exploring the outcome of similar campaigns and has instated systems designed to prevent such occurrences. Certain examples stand in play to explicate my opinion. Society, at least in my native @LOCATION1 and surely abroad in other democratic countries, dislikes enforced censorship for a few reasons. First, many countries have a @CAPS1 of @CAPS2 and privileges upheld in the face of the law. Our founding fathers wrote out one of the documents establishing this trend on the prompting of the general public. The first ten ammendments to our fine constitution, bundled as the @CAPS1 of @CAPS2, resulted. Some of the included statements ensure the freedom to speak as it publicly pleases us as citizens and the freedom to write, individually and collectively without boundaries. The removal of these principles so ingrained in our nation's conscience would cause a general uproar. We as a people instituted our government to preserve our freedoms, and we could prepare ourselves to replace it as implied in the @CAPS3 of @CAPS4 if so required of us to continue doing just that. Secondly, publications such as the ones mentioned for banning rebuke the enforcement of opinion for its effects on society. I can mention three books portraying this dystopic outlook on censorship. '@CAPS5 @NUM1,' required by state standards for one possible choice of reading assigned to us by my teacher, describes book burning and utmost uniformity between citizens. '@DATE1,' by @PERSON2, I know describes a dystopia in which all citizens completely submit their will to and omnipotent '@CAPS6 @CAPS7,' who utilizes omnicient surveillanceeven though I have not read the composition myself. '@CAPS8 @CAPS7,' a recent novel by @PERSON1 whose title employs a pun on the name of @DATE1's prime antagonist, weaves the exciting tale of an older teenager who tries to beat the system of surveillance from under the radar. All, however, betray a sense of fear in their content, and that fear has transferred directly into local civilization. In reviewing the aspects of censorship portrayed in its effects, the system itself reveals that the even the intended creation of a utopia and compliance through censorship @MONTH1 result in decline and misery throughout the area within which government or civil officials practice the method. In any case, a more effective solution must exist today. To prove the point, let me introduce some content advisory systems currently in place. Libraries divide themselves into sections for the various age groups, and therefore create an inherent barrier between differing groups of content deemed appropriate only in the face of maturity. The film and television industries rely on ratings displayed at various times during video to provide the same sort of psychological fence dividing content into pieces. Even the video game industry, into which I plan to inject myself upon exiting college, has a system in place to separate existing media into tiered subcategories designed in a similar way to film ratings. Different regions utilize different systems, but that of the @ORGANIZATION3, or the @ORGANIZATION1 for the @ORGANIZATION2, compares relatively well in ranking video games to the rest of the globe. As explained, censorship already exists in a form accptable to all. Nobody forces anybody to comply to the recommendations, but hopefully everyone does so on their honor. Capable parents most definely follow the guidelines which have cropped up over the years. Only if these methods of moderation were enforced would everyone be upset. It's up to everyone to prevent a situation like unto the worst-case scenario and usersresponsibly the systems available for this purpose

The mood created by the @CAPS1 in the memoir is that at first was getting to short in who the character was. Like it went slow then fast than slow that person couldn't controle her writing

in the story out all so mood was like think fast then think hard and good nex time the writer should stay at one speed why then readers give up on the story. Who know's that story could of been the best but Just didnt want to stay at one speed. See me @CAPS2 not the one to talk because I cant write has good but i do read and very welling so take it from a reader not a writer. Also the story was to plan like any other story bad before it gets good I think if the writer he a she would of went slower with describeing the story and would of been different but the frist @NUM1 minoter I was like oh this is like any other story @CAPS2 gona stop reading right now boreing and rush the answer be careful how you write or choice these stories you dont know whats best fo me I do. You dont know me from a hole in a wall get a batter program.

There were three main @CAPS1 that the builders faced: safety, Nature and THE LAW. The first obstacle that they faced was safety. Many blimps used Hydrogen instead of Helium. While Helium is a @CAPS2 gas, Hydrogen is a @CAPS3 which are combustible. The second obstacle they faced was Nature. The @CAPS4 winds blew the Blimps off target and because they weren't aero dynamic, it was @CAPS5 to maneuver them. The third obstacle was a law that stated that Blimps can't fly too low, so if the other @CAPS1 didn't exist, it would still be illegal. IN conclusion, they Should Have built a @CAPS6 because @CAPS7 are simply better than Blimps.

The features of the barren desert path make the cyclist quite nervous, but they also make him determined to escape them. He passes ?ghost towns,? ?abandoned buildings,? and diamondback snakes. These are images traditionally associated with being lost in the deserts, and would be enough to instill fear in most anyone travelling alone. The author even remarks that sadists are probably finding his story pleasing. He often mentions fears of ?dropping? dead, being eaten by vultures, and, at one point, even wishing death upon himself via choking albeit jokingly. And yet he was determined to live. In spite of the odds stacked against him, he moved on, even after losing ?what (he) believed to be (his) lost burst energy." He even maintains a sense of humor throughout, writing of a diary entry that would be left behind that remarks on the wisdom of old men. In the end, when he finds a place to rest, he turns it all into a lesson he'll surely abide by: follow the map!

I'm a tell you about moments sometimes even adventures with a boy named @CAPS1.C. @CAPS4 has brown hair that is up to his neck, that @CAPS4 loves to swoosh around like in the movies. @CAPS4 most definitely doesn't like his bangs cut to short other wise the swoosh will not turn out the same way. @CAPS4 has brown eyes that just seem to sparkle and a smile that seems to fool

everyone. "@CAPS2, @CAPS4's so adorable", they say."@CAPS2, @CAPS4 so cute", they say.@CAPS1.C is cute, but does things that will amaze you! Things you wouldn't think a kid his age could make possible. Like i always say, "@CAPS4'll make you work for your money!"The thing is @CAPS4's only @NUM1 years of age, well right now @CAPS17. @CAPS4 loves the attention, @CAPS4'll do almost anything for it. Yet @CAPS4's very lovable and sometimes sweet.@CAPS4 loves comedy, cartoons, candy, video games, the works. @CAPS1.C is lots of fun believe me when i say you'll never get bored! I think when @CAPS4 was @NUM2 1/@NUM2 when the adventures began. @CAPS4 would always go in the refrigerator and just @CAPS8 at the egg cartons and double check if anyone was around. Then @CAPS4'd grab one and toss it and say, "@CAPS5, chicken?" with a baby type accent, so adorable! but @CAPS4'd try another and another and another until all the eggs were splattered all over the place. @CAPS4'd run off knowing we're coming to close to him and hide. I must admit i didn't know who was doing all this at first. I kind of thought it was @CAPS1.C, but wasn't too sure. That was only one mischief.@CAPS4 also loved this aquarium that was there, very bright because of the light it just seem to attract him. @CAPS4'd get closer and closer and just @CAPS8 at the fishes. Watching them swim, all the different pretty colors. The rocks and the little toys seemed to attract him more. When @CAPS5 one was around @CAPS4'd @CAPS8 above the tank and stick his hand in very carefully and say,"@CAPS7!"trying to attempt to grab it, but @CAPS5 success. When @CAPS4 heard that someone was coming or getting closer to him @CAPS4'd run so fast like the bird cartoon from loony toons always out smarting the coyote. There would be a mess, of course. Though everyone knew @CAPS4'd be trouble once @CAPS4'd start walking! @CAPS4 was so cute though.Now when @CAPS4 was between the ages @NUM4 and @NUM5, @CAPS4 just loved picking at people just for the fun of it, or so we thought. @CAPS4 do it for the attention so we'd go drop what were doing and go run after him. What @CAPS4'd do was grab something that was valuable to a certain person and go up to them and say, "@CAPS8! me have, me have."Of course, we had to go run after him, but sometimes you'd have to be careful because if not @CAPS4'd toss if and wham! It would brake.there's only a few things I'm pointing out here, but in reality there was much more and it was ore exciting then might be explaining it! age @NUM5 was a workout! One day we decide to lend @CAPS1.C our @CAPS10 touch to entertain him because we were busy doing our own things and @CAPS1.C discovers you tube! @CAPS4 loves this show called @CAPS12 and @CAPS13! In other words @CAPS4 calls it, "@CAPS14 @CAPS15 @CAPS16."@CAPS17 @CAPS4'd go on it and watch most of the t.v shows on the @CAPS10 touch and use the apps on it! @CAPS4 is very smart when it comes to using electronics if i @MONTH1 add. The day after that @CAPS4'd ask for the @CAPS10 touch almost frequently then every time @CAPS4 was denied of using it, @CAPS4'd go to his methods in getting it! Of course what @CAPS4 did was, when lights were out and everyone was asleep @CAPS4'd @CAPS8 all over, when finally @CAPS4'd @CAPS8 under the pillows and grab them and take it with him. The very next morning we were after him! @CAPS4 told us, but yet again @CAPS4 would do it! Then we went to drastic measures we hid the @CAPS10 touches else where. now at @NUM1 years of age! whoa, well @CAPS5 in my opinion I think @CAPS4 calmed down a little more. Others @MONTH1 not think so, but i know so! Anyways @CAPS4 is now @NUM1 which means @CAPS4 is now starting school! which i hear is quite entertaining for those who are not involved! They love @CAPS1.C but sometimes @CAPS4 can be a little too much, ha. @CAPS4 loves roaming around doing what @CAPS4 loves most and just having a great time, which i admire. well if i were to say one little short story about him as a @NUM1 year old I'd pick, how @CAPS5 matter what @CAPS4'd always defend his brothers! @CAPS4 wont let @CAPS5 one bully his brothers, @CAPS5 matter what the odds! i admire most about him is that!

The mood created by the author was one of happiness, love, and caring. Not only does it show in his style, but the author also gives details that really create the vibe. In paragraph @NUM1, the author describes the food as "rich culinary skills and love of cooking," and the music as "passionate Cuban music...mixing with the aromas of the kitchen." This creates a homely affect to the scene, along with the paragraph about the many "family members" that came over for meals. The author describes this and explains that this was all possible, despite the nation's racism, because his parents worked hard to get where they were for the faith that their children would have a better life than they had. With all of the details, the author creates a loving, cultural affect can only be found with great family and friends.

Censorship, or the ability to control what is seen or heard, is a term that is taken very differently from one person to the next. Music, if it is found offensive or inappropriate, can be consored or even banned from listening. Some magazines that are found at grocery stores,

libraries, and sometimes even airports, have @ORGANIZATION1 covers on the front to visually censor the front page of the magazine. Movies are given ratings based on their level of explicit material, and when shown on basic cable, they sometimes can have either silenced words, or more appropriate words brought in to fit the dialogue in the movie. Books, although very rarely, have been banned from libraries and censored from the entire world. Some books have been previously censored, but became uncensored and brought back to libraries. In my opinion, censorship should not be based on a single person's view of the material, but rather on the viewpoint of the public. Growing up, my parents would watch carefully about what shows I watched, what music I listened to, or the types of magazines that I looked at. When I was growing up, I loved to watch professional wrestling. I loved to watch big scary guys as tall as seven feet hitting each other with steel chairs, crashing each other into tables, or throwing each other off of twenty-foot steel cages. My brother and I used to have a favorite wrestler that we would for every week, @PERSON1 @CAPS1 could frighten any other wrestler who stood in his way. My brother and I loved to watch @PERSON1 @CAPS1 compete every week for a chance at a world championship belt. As time passed, professional wrestling began to welcome in beautiful women into their business. These women would come out onto the ring with tight, shiny, lingerie on as they became eye-candy for the men who watched professional wrestling. One day, I'm watching two girls fighting in a match when my mom walks in. She takes one look at the half-naked girls fighting each other and turns off the @CAPS3 and declares that professional wrestling is too adult for me. Even though I was twelve at the time, I didn't want to get in an argument with my mom about how much I should be allowed to see. Censorship can be based on the ideas and viewpoints of the parents and guardians. I was in grade school when I fell in love with the show, '@CAPS4 @CAPS5 @CAPS6.' @CAPS7 is a show about four boys who go on unintentional adventures to save their @CAPS4 @CAPS5. These four boys, who are all around eleven years old, use curse words that some adults would be afraid to use in every day life. Their behavior is very controversial and the show itself has been forced to ban a few of their episodes for safety reasons. One problem with @CAPS7 show was that my dad loved @CAPS7 show as well, and tried to get my mom to like the show. When my mom saw the show, she immediately banned me from watching it because of its explicit content. Now that I am older, I am able to make my own decisions about what I watch, but as a kid, my parents decided what was appropriate for me. I grew up listening to several different types of music. My brother listened to rap, alternative, and even songs that were in musicals because he was in show choir. My dad introduced me to classic rock, and my mom loved soft rock. Although I didn't necessarily like the music that my mom liked, I learned to love my dad's music and my brother's music. I loved to listen to music from artists like @ORGANIZATION4, @ORGANIZATION1, @LOCATION1, @ORGANIZATION3, @CAPS8, @CAPS9, and so on. My musical tastes branched out into a variety of different genres. One day, I'm walking in the hallway when I hear some music coming from the living room. I go to see what is playing because it sounds unfamiliar. My dad and my brother told me to go into another room and not listen to the music. The song was by a band named @ORGANIZATION2. Even though it might seem unfair, censorship, given by the parents and guardians, is very necessary. Although some people might find a certain piece of material offensive, it doesn't mean that the entire world should be banned from the material itself. If that person wants to keep away from the material and keep their kids from seeing or listening to that material, they are able to do that. Censorship, given by the parents or guardians, is the best way to view censorship. Nothing should be banned from a library, music store, or any other place that sells these materials. Censorship is important, but the entire banning of a certain piece of material is unjust.

Dear @ORGANIZATION3, @CAPS1 has come to @CAPS2 attention that certain members of our society believe that computers are not beneficial. This position comes from lack judgement and a closed mind. Computers are lifelines to buisness workers who use them to complete all of their work, these tools also enable news of disaster or weather to spread efficiently and effectively. These technological devices also create and sustain communication between family members and friends. In todays society computers are vital and getting rid of them would be like stopping oxygen from making its way to the body, being accompanied by multiple severe consequences. First and foremost, about @PERCENT1 of all modern companies require their employees to work on computers. These works of art aren't just handy-dandy toys , rather @CAPS5 essential to the working class

@CAPS5 a # @NUM1 pencil to a student taking a cut. @PERSON3, an owner of a small buisness, agrees. "@CAPS2 company designs software and uses computers @NUM2. Many of @CAPS2 employees work from home and have to own computers." The growth of computers is not something to be frowned upon, rather an achievement in technology enhancing the lives of others. By ripping our computers from lives of workers chaos would be created with many unappealing consequences. Adults aren't the only ones whose jobs consists of computers. Nowadays students' homework is mostly online, computers decrease the amout of time needed to write an essay and are glare to students of all ages, @PERSON4, an eighth grades at @ORGANIZATION1, is an example of this dilemma. Every night she has at least three hours of homework and usually one hour be @CAPS1 requires a computer, however, this isn't a problem because @CAPS1 cuts back the time @CAPS1 takes for @PERSON4 to do her homework. She can quickly type up an @CAPS3 essay or research a science topic instead of doing @CAPS1 painstakingly slow using an old fashion method. Moreover, computers are doors into the real world, especially for residents of @LOCATION1. Whether some people like to believe @CAPS1 or not, @LOCATION1 is a bit of a sicluded area where people aren't aware of what is going on outside of their closed off town. Computers cause news to spread like electricity and open @LOCATION1 residents eyes to national and global problems @PERSON2, another student at @ORGANIZATION5, states, " @CAPS4 the earthquake took place in @LOCATION3 @CAPS2 friends and I were all at lunch, @CAPS5 we came back to class @CAPS2 teacher was projecting the news via her computer onto the white board" @CAPS6 computers were taken away a stream of knowledge would be cut off from adults and children. Most importantly, computers create communication between friends and family calling up to talk to someone isn't always an option, so computers are the better choice. Families can connect with each other no matter @CAPS6 they have cell phone reception or what area of the world they are in, @PERSON1 is a senior at @LOCATION1 @CAPS7 @ORGANIZATION1 who agrees. "@CAPS4 I go to college next year I am going all the way to @LOCATION2 and want to be able to talk to @CAPS2 family, via email and instant message I can contact them even @CAPS6 its inconvenient because they don't have to respond right away." @PERSON1 brings up a good point computers serve the luxury of communication, which is vital to keep @PERCENT2 of healthy relationships, @CAPS5 shows a study at @ORGANIZATION4. In conclusion, computers are an incredible piece of equipment that should be valued and not taken away. The are vital to workers and students and bring news to residents of any corner of the world. Computers also are how friends and family are able to stay connected and communicate. Therefore, I urge you, readers of the @ORGANIZATION2, to raise your voice about the benefits of computers, so they aren't taken away from our society.

'''text

The setting of this story greatly affects the cyclist's attitude and adversities. The path of the cyclist is through California deserts, which are dry and hot. This first presents the major conflict of the story, the danger of the cyclist getting heatstroke. In the reading, the author says, "I had been hitting my water bottles pretty regularly." If the setting was in a cooler climate, the author would most likely not drink as often, and would not face dehydration. The trip would not have been as dangerous for the cyclist if the climate was different. Another element of the setting that affected the cyclist was the terrain. In the reading it says, "Flat road was replaced by short, rolling hills." The rough road not only would take a toll on the author's body, but also his mind. While riding, the author thinks, "I was doing a water-depleting 12 mph." This shows how his attitude is getting less and less optimistic as well as

keeping his mind on his thirst. Thinking of his thirst would only get him more thirsty. The small change in terrain had a large impact on the authors journey. Perhaps the most influential element of the setting is the isolation. Only until the end of the story does the cyclist run into another human. Up until that point, He was all alone, having to deal with his thirst and fatigue on his own. If the setting had been in a more urbanized area, the cyclist could have gotten help from other people, which would have made his ordeal very easy. Also known, that nobody was going to help him played a large role in the mental state of the author. In conclusion, the conflict of this story was set up by the setting. If the setting were not hot, rough, and isolated, the cyclist would have had an easy journey, and the story would not have been as exciting or interesting. A different setting in my opinion would have ruined the story.

'''text

Libraries are our way of knowing what has happened in the past whether it is all fact or maybe fiction. No matter what type of book it is, it still tells us a story of another place and another time. Libraries should not be censored. Taking away one book because of one sentence that seems vulgar and inappropriate for young readers is wrong. I understand that reading books with adult material such as drug abuse and sexuality can lead to experimentation but is that not life? At least once in our existence on earth we find ourselves curious about something at we try it, just to see what it is like. It is all a learning experience. History would most likely be the touchiest subject in our libraries mainly because we are ashamed of what we acted like thirty plus years ago, discrimination in @LOCATION1, the @CAPS1, and now the wars in the middle east. Some countries do not even teach their own history to students in school because they are embarrassed of what happened or afraid that it might happen again if the students know @CAPS6, why and what happened. Reading and knowing about what our ancestors did will help us lead a better future not destroy it. Today's media has overflowed with adult material not suitable for kids under @NUM1. If anything we need to start censoring what we broadcast on television and also what we post on the @CAPS4 and leave our libraries alone. Most of the books that are in our libraries has been there for like forty years so it is completely pointless to remove it when it has already educated young minds for over forty years. I truthfully do not know why you would want to remove books or censor them with a sharpie marker. All that is doing is giving readers less material to read. In @LOCATION2, elementary educators are not required to teach their students @CAPS6 to spell, at all. I walked into a third grade classroom and watched a girl spell @CAPS2 '@CAPS3' thinking that was the correct why to spell @CAPS2. The @ORGANIZATION1's excuse for not having teachers teach @CAPS6 to spell is that they should learn that from reading books everyday. Well guess what @LOCATION2, with the @CAPS4, gaming systems and iPods, little kids are not taking to reading like they did ten years ago and we are going to have a lot of future adults not know @CAPS6 to read and this is what it is going to be like. '@CAPS5 @CAPS6 do you spell encyclopedia?' '@CAPS6 should i know, I wasn't taught @CAPS6 to spell in @LOCATION2.' You see what I mean, so if you are going to take away the ability to spell you better not take away our books because they are the only things teaching our @ORGANIZATION1's future on @CAPS6 to spell simple words. Today we have the @CAPS4, gaming systems, iPods and @CAPS8 to entertain us on a daily basis. No one is taking to reading as a way to relieve boredom, they are just sitting on the couch watching television. And now if you reduce reading material for teens and young readers you are not encouraging us to read. You are taking away all of the interesting parts of a book. To be truthfull I will read and reread a book many times over if it is a good story with some extra sizzle. I do not enjoy books that do not have drugs, alcohol, family stress, war stories or even some sexuality mainly because books without that are boring. When i read books like that they make me feel better about my life and @CAPS6 I interact with others. I have learned @CAPS6 to deal with all of those things from books. Most of my knowledge comes from those types of books and I would hate for my children to not be able to read the same materials as I did at their age and learn from those books

The mood of the memoir I believe to be grateful or enspiring. Narciso's parents are imigrants from Cuba who live in a rasict community and are working to be able to support there kids. They are great parents to Narciso and provide him with basic naccessidies. They feed him, and buy him clothes. Narciso is very kind and thankful for the trouble his mother and father go through and he is also very considerate to try to help them when they need it. The mood is grateful because that is how Narciso feels toworrds his parents.

The dirigibles had @NUM1 obstacles to face, They had posidletys of fire, poping, and law trouddle. They feared the dirigible would get on fire for it has hydrogen, that is rather highly flammable. They do not want to relate to the accident that happened in lakehurst, New Jersey in May 6, 1937. also withe the fear of pops rase more concens. for the wind might blow it of chores into another building with a sharpe top that could possibley puncher the baloon. The feared this happening in downtown New York were it is highly populated. another reson prodley the biggest was that Empire State Building wanted a law for air crafts flying low over urban areas, so that ment there was no chance they could do what they were planing on doing.

The effect computers have on humans is by far a positive one, and the outstanding intelligence computers provide must be embraced, not feared and avoided. Whether we like it or not, computers will be necessary to solve issues of the future. Besides, for personal usage, computers are highly beneficial. The main reason people fear computers is because of the dangers it radiates, which really isn't reasonable, when analyzed closely. To not use such a complex and developed system such as the computer is completely irrational, the computer is the future plain and simple. It is inevitable that the computer and technology related to that, paint the picture of the future of our world. Whether people like the concept or not, computers will be necessary to solve the problems and calamities that will wreak havoc on the world in time. Computers can predict natural disasters, and with that, people in the area of the catastrophe's destination can be evacuated. Lives can be saved. Computers can calculate, pollutional margins, and provide solutions to the large amount of pollution humans release in the air and @CAPS1. @ORGANIZATION1 Nature can be spared. So much more can be attained by putting the computer to full use. People must adapt to @LOCATION1 technology, or we will fall behind and watch our @CAPS1 slip away. This proves the effect computers have on people is not only positive, but necessary to advance in an ever-growing world. Stepping down to a less global level of effects and to a more personal level proves to also be beneficial to humans. Computers in most cases, do better work and create less error than humans themselves. Instead of requiring humans to work in dangerous locations such as deep water, computers can be sent down to visualize the before unattainable areas. Also, faster communication is extremely helpful in certain circumstances, such as an occurrence in a workplace causing the area to be off-limits. As member of the workplace can simply e-mail his employer, informing them of the accuracy and preventing them from putting themselves in danger, or simply preventing men the trouble of a commute to work. Even from @LOCATION1 to @LOCATION2, with simply the press of "@CAPS2", people across the world can be of the accident. Foreign communication, specifically by means of instant messaging can strengthen our tie with other nations, in the fields of both business and government. Lastly, finding information, is so easy with a @CAPS3. Where would be without computers to find information rapidly? We would be still going to the library and checking out books, reading through page after page to find the information that would have taken less even a minute on a computer. Even a person agreed computer would have to admit that to be highly beneficial. As you can see, on even a less global level of use, the computer still proves to have a positive effect on its users. The one thing, parents especially, that fuels the negative opinion on computers is safety and reliability. When these two topics are analyzed, it is so simple to eliminate unreliability and danger of the computer. Installing a program of which there are infinite to choose from, that allows "good" websites to be viewed, and "bad" on potentially dangerous @CAPS4 to be binded. This eliminates all that is heard about on-line interactions and activity gone bad. Even without software to block dangerous websites, computers are generally safe. Only @NUM1 out of @NUM2 websites, includes content considered "detrimental" to humans. Also, of those @NUM2, @NUM4 provide reliable, correct information. Those two statistics annihilate the question of safety and reliability that some users come to ponder. That goes to show that the computer's negative aspects can be eliminate, leaving only

the positives to remain. In conclusion, computers have a far more positive influence on users than negatives. Computers are the future, and have even proven to save lives. Why wouldn't somebody want to save the life of another? Also, the benefits of @CAPS3, or personal computers, are too large and helpful to pass up. Lastly, when viewed carefully, computers are very reliable, and can be made extremely safe, which eliminates the main fear computers. We have come so far to create such a safe, beneficial, and necessary device, we must put it to use, and by doing so, better our own lives, and the life of @ORGANIZATION1.

There are many reasons wht the author chose to conclude the story with Saeng vowing to attempt the driver's test again. At first, the story begins with a tone of sadness and seing fact "as Saeng walks home after failing her driver's test" this quote sets the tone as sadness because she has failled a very important test and she is walking alone. "She sees a familier plant" is when the hope comes back into the story. When she brings the plant she had purchased here to her mother also sees delinlted. " where did you get it?" her mother aasked, and Saeng replied "I bought it." She bought it for @MONEY1 more then her mother said for all of the seeds in the garden. As time went on it was clear to her mother the plant signifies strength and hope to her daughter and endyat the plant with have as well I remember a time upon my mother bought me a work-candle cat desdion. I felt it was a waist of money, but when @CAPS1 saw her light delights for I it with love as well. When Saeng's mother felt have from thr plants made Saeng happy and gave her courage the driver's test again. is the reason why the author chose to conclude the story with Saeng vowing to attempt the driver's test again.

Censorship in @ORGANIZATION1 has been around for as long as there has been the various mediums of art. In many cases the censorship @CAPS9 of what many would agree as not suitable material for anyone to create and enjoy. But then in other more serious issues that the censor has deemed not suitable for a certain audience, or even to a whole country. What @CAPS9 it that gives a select few the right to ban any given number of imaginative creations, even if they are in some aspects more lued in nature? Censorship has and @CAPS9 still a very usefull tool that many governments employ to accomplish a wide variety of tasks, considered to ensure the 'safety' of both our minds and bodies. Some of the more widely know cases of this most despicable tactic of control come from the countries of @CAPS1 @CAPS2 @LOCATION3, @LOCATION4R, @CAPS3 @LOCATION5, and @LOCATION2. In these countries all materials that are deemed potentially hazardous to the welfare of the @ORGANIZATION2 are heavily policed and in many cases destroyed. The most noteworthy instances of this occured in @LOCATION3, where the @CAPS4 would gather up large amounts of books from the people and burn them in massive rallies. The people were so enthralled by the @CAPS5 leadership that they would often times freely relenquish their books with no resistance, and in some cases join in and throw the books in themselves. The same thing @CAPS9 still occurring in @LOCATION5 today, wtih a censor still on their internet surfing possibilities. In @DATE1 the popular search engine @ORGANIZATION3 attempted to set up shop in the country, but quickly entered into dispute with the @ORGANIZATION2 about the censoring of certain materials. Some months after the argument began over the censoring of @LOCATION5's people, the company completely removed all bans for a short time, much to the dismay of the @ORGANIZATION2. During that time it @CAPS9 reported that some of the main search topics were that of many social reformers and of different religions than that of the @ORGANIZATION2's sanctioned religion. But the one country that takes the cake for having the most censorship @CAPS9 @LOCATION2, they're @ORGANIZATION2 has restricted and policed any technology in the country. The common people live in a so called '@CAPS6 @CAPS7 @CAPS8'. In our home country of the @LOCATION1 we are promised many rights to protect our freedom as citizens. We are promised the freedom of speech as well as press, and in censoring our libraries they would restrict both. If we do not stand up and protect our rights, then who will? Are we not a @ORGANIZATION2 for the people, by the people?

Why are we allowing the censorship of our own intellectual creations in a place that was created to provide access to said materials for those who are less fortunate, so they themselves can gain knowledge and understanding. If we as a people were to allow such a blatant restriction on our given freedoms, then we are in no position to have them in the first place. Our country was founded and later almost torn apart by the men and women who were willing to risk it all in order to protect their freedoms in this country. Are we descendants of those same people? If so why should we allow ourselves to squander what was hard fought for and earned by our forefathers. The censor often poses a few questions that do cause one to wonder '@CAPS9 it really better off this way?'. They point out that for every great work of intellegent art, other of a more deviant nature create some more innapropriate pieces of 'art'. Pornography @CAPS9 the most prevalent of their examples, pointing out that if they did not restrict it, then who would stop the hundreds of children that not only roam the libraries bookshelves but also the provided internet services. It @CAPS9 a reasonable question, once that should be take into consideration, but in answer to it I believe that it @CAPS9 and will always be the job of the parent or guardian that bring the child with them. It @CAPS9 simply not enough to drop a child off at the local library and hope they find something interesting. Helping that child find what they want @CAPS9 a journey that should be taken by both the parent and the child. And what about those who believe the censor isn't always right about what @CAPS9 and what @CAPS9 not acceptable for the general @ORGANIZATION1? As author Katherine Paterson once said 'All of us can think of a book that we hope none or any other children have taken off the shelf. But if I have the right to remove that book from the shelf-- that work I abhor -- then you also have exactly the same right and so does everyone else. And then we have no books left on the shelf for any of us.'

Censorship has been around for a very long time, and will most likely never be fully cut out of any functioning @ORGANIZATION2. That @CAPS9 sadly an inevitability that cannot be avoided. But the amount that it occurs in your daily life will be directly affected by how much of your freedom you are willing to stand up for.

Moving around from place to place was always hard, I hated the thought of never seeing any friends or family. Never was the only word I could hold on to, there was no point in hope it was a futile feeling. I knew I would dearly miss @LOCATION1, and @ORGANIZATION1 just sounded so far; a twelve hour drive seemed like the edge of the earth to me. I visited @ORGANIZATION1 before, it was boring to tell the truth, and on top of that looking for a new house would bore me furthermore, all I could think about was @LOCATION1. Now I was moving there! When I first heard about the move I was infuriated and tried to fight against this poor decision, I was sure that my parents were making a mistake. As hard as I fought I could not win, my tears couldn't move my parents in the slightest way even in my greatest efforts, I was broken and confined to the moving van for twelve hours but to me it felt like forever. Finally my departure was over and my legs were sore and tired, I didn't want to manouver out of my seat or even touch @ORGANIZATION1's soil. The ground was dirty and tainted and the apartment complex was old and overly occupied, the rain and mud didn't help my attitude much either. Everything about this place was disgusting and the thought of still sharing a room with my younger brother made me feel sick to my stomach. I stepped foot out side and entered my apartment and went straight to my bleakly colored room. I sat down and collected my thoughts trying to determine the pros and cons of my situation. The walls were caving in on me and they seemed to take the shape of bars, I was condemned to this fait that I could not escape untill I turned @NUM1, and that was more than @NUM2 years away! I was stuck in my apartment for three days before I wandered outside, but it wasn't all that horrible considering it was raining all the time even at the end of the @DATE2 which was abnormal for me. I didn't want to leave my room or my apartment, all I wanted to do is watch @DATE1 @TIME1 cartoons in my room. I felt alone and out of place I had no friends to talk to, my parents wouldent listen to me, and my little brother was only @NUM3 so he wouldent understand. There were no more smiles when I found out that I had to go to school the next day. Aloha park sounded like some school that would have great funding and spoiled rich kids in it but it was actually the exact opposite. It was an older school with kids that mostly lived in lower income housing at the time. In someways it was rather comforting knowing that I lived the same way temporarily. The first day of school was frightening, it was my first major transition into a new unfamilliar place. My teacher was old and grouchy, she seemed to have a major chip on her shoulder. Suddenly, out of the blue she held my hand in the hallway which was humilliating and definately not comforting. I heard my new classmates giggle and laugh when they saw me I thought I would never make any friends. The humiliation was withstandable but the thought of being in this class for the next nine months was a fear beyond belief. My teacher told me to take a seat on the far side of the room next to three boys, they all had the same expression

which was an amalgamation of both alienated confusion and territorial pride. The feeling of being unwelcome would be an understatement of the new nervous sensation that had surrounded me. I sat down unaware of the actions that the three boys might deal on to me, surprisingly the only occurrence was a series of temporary stares and an awkward silence. As the day continued life had again had become somewhat casual, until the boys had started to talk about the opposite gender and my attention was directly turned towards them. I sat there and quietly listened and smirked at the inappropriate conversation that I was clearly not supposed to be a part of. They laughed and snickered and covered their mouths embarrassingly, as I looked at them and considered them amateurs of the comical arts. I wanted to say something that I held onto for the whole conversation and then I took my chances to add a most important joke and quickly I muttered my overly inappropriate sentence. They confusingly looked at me and asked me what I had said, I wasn't sure how they would take the joke but I risked another chance and repeated it. The group of boys grew silent and the only noises were those of the other students talking to each other, suddenly they bursted out laughing. I was overjoyed that they had a sense of humor, and after that I had friends and @CAPS1.

The builders faced a lot of issues to allow dirigibles to land place on the Empire State Building. The builders had to be very cautious or carefull on building the platform to allow dirigibles to dock. The dirigibles (Blimp) were very big transportation machines that were made out of Steel and Cotton Fabric that was filled with hydrogen and helium. Hydrogen is a flammable substance which the builders had to be carefull with power and electricity supplies. To allow a blimp to dock above @NUM1 feet in the air on the Empire State Building, they need to work on the framing of the building so it there is any bad weather condition, the building would not collapse, and would be stable. Because of all these problems the procautions the builders had to make, makeing the mast was a failuer and left for the future transportations to plains.

'''text

The author concludes the story with this paragraph to emphasize the willingness of Saeng to overcome the obstacles and adapt to her new life. The hibiscus discussed in the ending quote describes Saeng's new hope and determination to succeed in the United States. For example in the text it states, "its fine petals splayed back to reveal a long stamen tipped with yellow pollen. Saeng felt a shock of recognition so intense, it was almost visceral. When Saeng had found a plant that seemed to tie together her past in Vietnam and her future in @LOCATION3, she was overwhelmed. The hibiscus represents new hope in a seemingly impossible situation. When the hibiscus has blossomed, her world will be open and a new life will be waiting to begin. With this thought realized at the end of the story, the reader understands that Saeng has found new

stability and will eventually succeed. In addition, in the text it says, 'it felt smooth and cool, with a hint of velvet toward the center just as she had known it would feel.' Saeng's past memories could be reached when this hibiscus was in new and that served as immense inspiration to her. The author ended the story with Saeng's new recollection and hope to prove that she had indeed found something helpful and stable in a new world.

'''text

Dear @CAPS1 @CAPS2, I strongly agree that certain materials should be removed from the shelves if they are found offensive. There are young children that will pick up a book, movie and/or @CAPS3 case, or even a magazine and read off whatever the front says. We @CAPS5't need younger children reading off whatever they know what to say. @CAPS7's already bad enough that they hear @CAPS7 from family members or @CAPS2 near them. The seller could also make an edited version of the book, movie, @CAPS3, or magazine. The sayings, 'You @CAPS5't like @CAPS7, than @CAPS5't look.', '@CAPS5't got anything nice to say, than @CAPS5't say anything at all.', and 'If you wouldn't want to hear @CAPS7, than @CAPS5't say @CAPS7.', strongly apply to this. The way this world is coming to, @CAPS7 seems like they @CAPS5't really mind who sees their product, as long as @CAPS2 are buying their product. Now a days, @CAPS7 seems like the younger the child is, the smarter @CAPS7'll be. If a four-year-old picked up a @PERSON1 @CAPS3 case, saw a pretty much naked grown adult on the case doesn't put a good thought in their head. That child's gonna grow thinking, '@CAPS7's okay to be naked. @PERSON1 did @CAPS7. Why can't I?'. Children learn more things from family and friends, before they start learning the truth in school. @CAPS7's just like you wouldn't want to take your child to the @CAPS8 @CAPS9, half naked to naked woman just walking around freely. Not something a little five-year-old needs to see. Just like a little five-year-old doesn't need to hear cussing or using the @CAPS10 name in vain. Having young children see, hear, say, think, or read things like that puts thoughts in their heads, making them think @CAPS7's okay to say whatever you want or to dress however they want, while they think @CAPS7's perfectly natural. Although, this @MONTH1 seem like a huge wake up call to some parents, but @CAPS7's not normal. @CAPS7's not more normal than telling your kids that they were a mistake. Things like that shouldn't be said to/ near children. Every parent wants the best for their child, they @CAPS5't want their children growing up in world that is full of bad nor do they want their children doing wrong. By letting companies sell their product with half naked @CAPS2 on the front cover of a magazine or @CAPS3 case, or by selling books that talk about murdering someone, hiding the body, and prays to @CAPS12 that they @CAPS5't get caught, or by playing music that is offensive in stores with younger kids, let's them think that they can sell whatever they want, promote their music where ever they want, makes the companies win. I'm not a mother, nor am I soon-to-be-a-mother, but I find @CAPS7 highly offensive that companies and stores would do that. i wouldn't want my child looking at a magazine than asking me questions about the @CAPS2 nearly naked, or have them ask me what a word means when @CAPS7's a cuss word. I certainly wouldn't buy a book that just looks strange or offensive to my child. As well, I strongly do believe in '@CAPS13 of @CAPS14', so the companies, in a way, do have a right to sell their product how @CAPS7 is. Just, if they really wanted to sell their product that

much, that bad, than they should sell @CAPS7 online. @CAPS7 @MONTH1 cost more, but at least everyone would know that their children wouldn't see @CAPS7. Although, once you owned @CAPS7, than @CAPS7's the buyers fault if their child saw @CAPS7. That would be on the parents plate to deal with. Another thing with children, is that their brain is still developing at that young age, their imagination is beyond fairy tale world, @CAPS7's kinda like their second home, only @CAPS7's inside their brain. Their brain is still developing and learning new things each and everyday. Once they go to the store with their parent (s), they're already jumping up and down off the walls for a new toy or a new pair of shoes, or just because they wanna run up and down the aisles, @CAPS7's bad enough having them see something inappropriate. I know I wouldn't let my children see things like those and I'm about @PERCENT1 certain you wouldn't want your children seeing those things. So, for the children's sake, think of them, their minds, and their developing brains and their off the wall imagination. Treat the children how you were treated growing up. Thank You, @PERSON2

'''text

The mood is a mixture of things, it's really hard to say with all the emotions the author throws around. But however the strongest feeling is unity, and family. I'm Not sure family can be called an emotion, but it is I think something that can be described by several. One of course is unity, or as he says it, "great solidarity and friendship" it's rather sweet how he characterizes family as something as the bonds you make with the people in contrast to other cultures where family is from blood ties and family is always first. So in a way I think his way of thinking comes from his culture. But also he puts in a bit of sadness but overall seems to be extremely thankful for what he has. As they say "happiness is nothing without appreciating it" and as he says "I learned the real definition of family" so apparently he knows real happiness

Computers have been one of technology's greatest advances, and yet one of society's downfall. Originally thought to spread ideas and faraway places, computers have been proven to do quick the contrary. Computers are dangerous devices, and are targeting young, wholesome kids. It is the main reason why society is today, predicting that this future generation is wobbling on an unsteady and weak foundation. These devices, the source of this mayhem, must immediately be removes from society because they take away the true benefits of life, have harmful effects on our health, and support some of the country's deadliest predators. Firstly, computers are linked with the crime of stealing the pleasures of childhood. Since @DATE1, the amount of adolescent users has shot up @PERCENT1. Amazing ly enough, @PERCENT2 of parents polled admitted that their children spend at least @NUM1 hours on the computer everyday. This takes away the pleasures or reading, exercising, spending time outside and hnging with friends and fmaily. These negative effects have an unhealthy toll on society, especially teenagers, the most frequent users. As a result diet and exercise are curtailed, raising the obesity number by @PERCENT3, and lock of ourdoor or family activities have promoted anti-social @CAPS1 this alarming rate out fufture generation @MONTH1 indeed be balancing on a cracked foundation. In addition to limiting diet and exercise, computers are also the source of yet another act. As long as the computers are plugged, they emit invisible wares of electromagnetic radiation. These waves are linked to diseases and cancers. Use of computers have to cause brain-tumors and leukemia, asw ell as brain disorder and cancers. Leukemia, when caused at a young age, is difficult to cuse and stants the child's development. Children exposed to at least @NUM2 hours a day to @ORGANIZATION1 compared to the few who spend their time outdoors are @NUM3 times as likely to develop such possibilities. The ultimate prevention to such risjs is to to the rest of such causes, computers and it completely. Lastly, computers are harmful because they also a deadly we open. As an adolescent unthinkingly says the web and chtrooms, they are at risk of atteck by thousands of children predators prowling the web. Computers contain extremely valuable and secret information, such as names, birthdates, genders and even social security numbers. With one

click, accepting a stronger invite, the online predators hack into the child's computer and obtain such valuable information. Or the predators @MONTH1 be less positive and attack directly-asking questions to the child themselves. In fact, a familiar story tells the unfortunate fate of one local @CAPS2 girl, who unknowingly chatted with an online stranger. This online predator smoothly invited her to the mall, where they moved. A couple devastating weeks later, the girl's remains were found, burned, as the last deadly act the predator performed on the teen. Three for, computers are simply too dangerous, a predator's thumbbook as they search for their next victim. By removing the computer, you eliminate the threats online predators pose for your child and you as well. It is amazing to learn that technology's greatest advancement, the computer, can unleash such harmful effects. Lack of engaging activities such as exercising and reading are stunted by the ever distracting computer its electromagnetic radiation attacks our health and lastly, it supports the acts of the thousands of cruel, sneaky online predators awaiting your child on the web. By removing the source of all these troubles, those acts can be prevented and society @MONTH1 begin to the pain for reform.

While trying to reach Yosemite by a shortcut, the cyclist faced many challenges and emotions. The cyclist started out his journey cheerfully with thoughts of the cool pines of Yosemite. ?The sun was beginning to beat down, but I barely noticed it.? The cyclist continued on his spirits as well as her water supply going down. The cyclist encouraged himself to keep going, just to find an open building. ?telling myself that if I could make it that far, I?d be fine.? @CAPS1 many abandoned factories, the cyclist tried many methods to decrease his thirst including sucking on stones. ?slowly gaining elevation while losing hope.? @CAPS2 the cyclist found a deserted building, he lost more and more hope. When the cyclist found open store with modern bathrooms, he had ?an overwhelming urge to seek out @PERSON1, kiss them, and buy some bait.? At the end the cyclist promised himself to always use his map.

'''text

Bright blue waves of morning light streamed over the hill tops as the waking sun began to rise to its daily position. The crisp, chill air arose the slumbering birds. Soon, the dusk setting transformed into a vibrant morning where the birds chattered with their mellifluous tone of song. Gentle breezes swept through the trees causing the leaves to dance. The green grass appeared to flow like an ocean while the cracked gravestones remained stationary; just as anchored ships at sea. Any spectator @MONTH1 agree that this particular graveyard scene presents a prodigious feeling; however, when one is to catch a glimpse of the stoical man who stands before the silent tombstone, the spectator's heart fills with empathy and despair. Motionless, young @PERSON1 stood before the tombstone. The gentle, but quick breeze began to accelerate into a harsh wind. @PERSON1's teary eyes and wet face began to dry. Although the windy weather was not uncommon for @PERSON2, @LOCATION1, a long lost memory interrupted @PERSON1's thought for an unknown reason. For a split moment, his mind drifted back to sixteen years ago when @CAPS5 was still alive. His eyes closed as the wind began to calm. He could nearly hear her voice. "@CAPS1, I would like you to meet someone," @CAPS5 yelled from upstairs. It was @DATE1, and six-year-old @PERSON1 came zealously running up the stairs. Breathing rapidly, he arrived at the top of the creaky stair case and skipped to his parent's room. "@CAPS2 @CAPS3?" he asked as he began to turn the cold, brass door knob. He opened the door just a crack and peered into the room. His blue eyes sparkled with curiosity. He observed how the mid-wife gracefully glided to his mother's bedside to prop her head up with another pillow. His attention then altered to his father who was sitting on the edge of the bed cradling a small bundle of pink blankets. "@CAPS4 hello to your new baby sister," said @PERSON1's mother. Still clutching the brass knob, @PERSON1 pushed open the door with the palm of his left hand. The door moaned as @PERSON1 began to place the tip of his @CAPS7 light-up sneaker onto the roan colored carpet in his parent's bedroom. Carefully and cautiously, he advanced to the foot of his parent's bed where his father sat. He stood in front of his father with wide eyes. "@CAPS5 was born less that an hour ago," said his father. @PERSON1 then looked to the heap of pink blankets. He nervously reached out his clammy hand and gently pinched the top layer of blankets to uncover the face of his little sister. All

was silent except for the wind outside. Inch-by-inch, he slowly began to peel back the top blanket; but, before @PERSON1 could even finish this task, the new-born baby let out a startling exhale. @PERSON1 lurched back and slammed against the bedroom door. His father jumped because of @PERSON1's reaction, but was careful not to wake the baby. @PERSON1 felt as if his heart was about to jump out of his chest. Wide-eyed and out of breath, he looked to his mother. To @PERSON1's surprise, he found his mother quite amused. The corners of her mouth began to curl up and a slight giggle leaked out. Soon enough, both his parents were immersed in a hypnotic laughter; their bodies shaking rhythmically. @PERSON1 began to relax and smiled at his mother. "@CAPS6 @CAPS5 scare you a little?" @CAPS5 asked. His father chimed in, "I would think so!" The three of them laughed for the next five minutes while the mid-wife simply smiled and the baby lay sound asleep in the strong arms of her father. @PERSON1 could feel the overwhelming essence of reality rushing back to him; just as the wind flowed through his brown hair. He missed her. He cried for her. He wished @CAPS5 could of won the ferocious battle fought between the human body and cancer; but, @CAPS5 didn't. Now @CAPS5 was gone. He would never see his mother on @LOCATION2 again. Although this memory succeeded in bringing him sadness, it failed to push @PERSON1 into depression. Instead, he suddenly recalled an ancient saying: "Laughter is the shortest distance between two people." @CAPS7 then, @PERSON1 suddenly realized how unbelievably close he was to his precious mother. He possessed eight years of memories made with his mother and many of these memories involved laughter. @PERSON1 tilted his head to the sun as tears of joy rushed down his face. Now he understood the fact that love is never dependent on time. Granted, he only knew his mother for a small chapter of his life; however, the memories made and laughter shared still continues to engulf @PERSON1 with his mother's love. In my mind, @PERSON1 is classified as a superior individual. As I am his only full sister, he never fails to educate me of his past memories with our mother. I love her and miss her, but know I will see her again someday; and when I do, we will be bound together with joy and laughter.

The mood created by the author in this memoir is greatfulness. The memoir showed how grateful Narciso's was to his parents. Their bravery and selflessness must have truley impacted his life then and probaly how he lives today. It also give the feeling of respect. In this memoir it shows how much he truley respected his parents and community. And last I think it gives the mood of admiration. The memoir really expressed how much he admired his parents and community. It showed how much he admired his parents bravery and he admired his overcoming of odds. He also admired how a community of different races could get over that and pull together to really make a community. Those are some of the moods that ar expressed in this memoir.

Essay

'''text

Just because I agree with something, do you have to agree too ? Your cousin believing in one thing, means you have to believe in it also? No, not in my opinion, and I hope not in yours either. If you were to see something you find offensive does that have to mean it offends another around you? The world contains things that children agree with and parents do not and this world consists of things that you like and others will not, but that does not make that item or that object invaluable or offending, and not the least bit inappropriate. Objects containing so called offensive material are always going to exist in the world we live in and they have for a while. They are going to be everywhere; in stores , in schools, inside, outside , they are all around, and there is no reason for them to be a problem. They will not disappear and that is nothing we want to have to worry about, that could become a criminal offence of any sorts. So why fight it, well I say we don't. Do you think that seeing an offensive item makes an area all the less attractive and good intended? What if something you liked , was of an offence to another , does that make it all the more wrong for you to like it? Almost all the things and materials in this world are liked and disliked all based upon opinions. Nothing in this world exists without opinions. Life in itself can be an opinion. I believe that if there is something in a library that is deemed offensive by one, it is not deemed offensive by all. Nothing should be removed from a shelf or a rack because another doesn't agree with it. Substitute other objects or ideas with this, if one person in the world was offended by another person would you just remove them from the human race? No, I sure hope you would not, but to some they @MONTH1

see that as their one resolution. Well me, I do not, and I'm a strong willed, strong opinionated person and to me that is all wrong. Anything published or released to the world, to the public by someone means that is their way of expressing something, it is their way of living, and they have that right. That is who they are, and that is what they like, that is another person , anything we see or hear in this world is someone else because that has come from an individual who is equal to us, so why lessen there equivalence because its not the same way I feel? We @MONTH1 not all agree with their way of life, we @MONTH1 not agree with their choice of clothes, but how are we to know if we agree with their way of heart? No characteristic dictates the other characteristics of another, so why should an item? A good thing to you could be a bad thing to another, and what if that disappeared? Taking a cd off a shelf will not vanish it from the world, it could be found somewhere else, but still that is like eliminating your hand because your fingers don't look like mine. Nothing can justify removing things from the stores and the world because one group of people don't understand it enough to feel the same and agree with it. Anything could be deemed inappropriate, but what if your vision of appropriate is another's eye to inappropriate. Maybe there just is no line of the definition inappropriate, especially in the world we live in today. If we start eliminating and removing everything we don't like, we would have nothing left, any and everything could be gone within a week or a month. People would take an inch to a mile , and erase everything, then we would start eliminating people we do not like , and it would all become a repeat. We learn about our history for a reason, does any of this resemble a situation or two the world has already been through? Erasing things from lives, have done no good before. If we start listening to the facts of people not agreeing with one thing, we will listen to the next, what happens when all the sudden the people come in again and say they do not like the women with blonde hair or the men with green eyes? The world will crash and burn before our eyes, and if I can identify these things at the age of fifteen, then some need to identify things at the age of fifty, accept that the world has its flaws too. So just because I agree with everything I said , are you going to agree with it also? No I know you will not, but think about that when you expect others to agree with what you say or think. When I think of people reducing the things that they do not like, I can already see the world losing it's pathetic value it has earned, and we @MONTH1 not all be fond of this world but we cannot lose it. Eliminating the things you do not have a fatuation with will do no good, so maybe we should take into acceptance the different people we've been blessed with and love what we have. Accept the world as it is, because it is what you live in and it is what you have, because with out it nothing would be anything. Attempt to fix the broken things not eliminate the jagged things

Dear newspapers journalist, People shouldn't have computers. Computers have a negative effect on most people. The @LOCATION1 has The highest number of obese citizens in the world. A lot of people spend their day sitting in front of a computer and work. Then they go home and go on their own computers instead of going for a walk or a bike ride. Some people like to look at photos of nature or birds on the internet, even though there's a whole forest outside. Another problem with computers is how safe they are. There are a lot of people on computers that don't belong there, and are trying to hack onto your computer. Viruses can sneak into your computer without you knowing it, and can look up everything on your computer, even personal information. They can even monitor what your typing, which could be passwords! A lot of people have been paying their taxes online and if there is a virus on their computer, they could get their person's personal information! Plus, most people who pay their taxes online have to use their online bank accounts, so now. They have your bank account password too! Computers are bad for most people. They make people become unhealthy and can get their personal information hacked by a virus.

They had to build the tower just right or els there would be landing problems if they added the sight seeing thing People would pay any price but the price of keeping it stable was not worth the effort. In the end the people were like going to make this a very popular thing but it was not up to them if it was or wasnot popular Wind and Landing always stood in there way so they paid alot-o-money to restableise the building. This ended up being a profit and ride of a lifetime

In the eassy ?DO NOT Exceed posted speed limit,? It is a clear cut for survival as it seems that this man is fighting to stay alive. As l know cyclists pedal for hours at a time and sometimes for hundreds of miles of he was biking where green grass and cool mountains collide the tone and

mood of the essay would of beam completely different.He uses sentences such as ? of two hundred degrees, deteriorating brain, birds would pick me up clean and drop from heatstroke.? @CAPS1 all make me want to read further in the essay to see lf he will be ok by thes end of his journey? I know what the feeling is when you are low of fluids because l have chronic dehydrated. I couldn?t imagine biking and only seeing desert hiss and passing tumble weed. It sounds like an awful experience. If he were somewhere cooler and colorful his experience wouldnt of been so horrific.

The importance as to why the author ended this story like this was to show readers the importance of the plant. It seems that because the author is not in her native country that she doesn't have a lot around in this new place that can comfort her. The author being able to find a hibiscus in a place she thought she wouldn't be able to gives her strength to do anything that she can. It is possible that whatever the challenge @MONTH1 be that the author is trying to get by the fact that she has some support from the plant gives her the achievement and confidence to complete her task

'''text

I rested my back on the cool steel of the lockers trying to ease my nerves. "@CAPS1 game is everything we have worked for- every excruciating practice, every tedious drill, and every game film we have studied down to the minutia. It was all to prepare us for tonight. @CAPS7 we lose tonight, everything we have worked was for nothing." I listened attentively as @PERSON1, our team captain, spoke. The words she chose for our pre-game speech were straight to the point, and anything but sugar coated. As I glanced around the locker room it was easy to observe that everyone one of my teammates was anxious. Emilie was vigorously chewing what was left of her nails, while @LOCATION1 preferred to show her uneasiness by the constant tapping of her foot. @PERSON1 finished her speech, and with the break of our huddle we entered the gymnasium. The stands were packed with familiar faces of our small town. In a small section of the stands there was a group of people wearing colors not native to our school. @CAPS1 brutal reminder brought my attention back to warm ups. The twenty minutes we had for warm ups seemed to last no longer than two minutes. The announcer began to state our starting line up, but it was no use. The roar of the crowd overpowered the speaker system. It seemed as @CAPS7 everyone from our town of five thousand was attending the game. Not an empty space was left in the bleachers. The bench vibrated from the stomping and clapping of the crowd, threatening with every shake to collapse. The starting five for each team walked out to the center of the court for tip off. With the loss of the tip off our team was quickly put under pressure. From the first possession of the game we were chasing our opponent. The first two quarters ended with a dead even score. Feeling discouraged my team regrouped in the locker room for @DATE2 time. We entered the locker room a moment before my @CAPS3. I took @CAPS1 opportunity to @CAPS2 around at the expressions' of my teammates. Nothing, but disappointment and fear crossed their face's. My @CAPS3 opened the door, and I instinctively braced myself for the throwing of keys against the wall, or the smash of the clip board. My team had witnessed these acts of rage countless times before. To my surprise, my @CAPS3 entered with complete poise and composure, as @CAPS7 our first @DATE2 of treacherous play didn't phase him. We were not yelled at, or criticized. Instead, he rubbed his eyes, face down and shoulders hunched over. His belly began to shake, shortly followed by his shoulders. My first hypothesis was that he was crying, but then to my amazement, I heard the soft chuckle of our @CAPS3. Soon that soft chuckle metamorphosised into a stomach thrusting, loud cackle. My team exchanged confused glances, and waited for my @CAPS3's explanation in anticipation. "@CAPS2 at yourself!" @CAPS3 @CAPS4 ordered. "@CAPS5 are all more tentative than when I asked @PERSON2 out to my first dance!" We could always rely on @CAPS3 for an unrelated metaphor. Even @CAPS7 it wasn't related to basketball, the point was clear. "@CAPS7 @CAPS5 guys would just believe in yourself the way I believe in @CAPS5, @CAPS1 game would be a blow out! Instead, @CAPS5 are playing like a bunch of bunny foo-foos!" We all laughed with the thought of playing like the nursery rhyme we had hear so frequently when we were children. The speech @CAPS3 @CAPS4 gave eased us all. The confident team we should have been from the start of the match was now prepared to win the @DATE2. To think that @CAPS1 confidence came from just one comforting laugh seemed almost improbable. The whistle blew to start the @DATE2. We played with such assertiveness and confidence that @CAPS7 @CAPS5 were to compare one @DATE2 with the other, it would @CAPS2 like two different teams. We grasped the lead early in the @DATE1, and sustained it for the rest of the game. The victory of that night's game lead us one round deeper into the state tournament. As I walked back to the locker room I glanced around the massive gym. I looked

at: the crowd, score board, opponents, referees and news reporters. I realized how easy it is to get caught up everything that shouldn't effect @CAPS5. All the distractions easily make @CAPS5 forget the main purpose of why @CAPS5 play the game. Occasionally we need reminders, like the calming laugh of @CAPS3 @CAPS4. Without that reassuring laugh, my team never would have united, and defeated our opponent.

```

The idea was kind of unrealistic in the first place. When these dirigables would try to dock to this building, the structure of the building wouldn't be able to handle the violent winds and the zeppelin. It caused many problems. What if the dirigible attempted to dock and the heavy winds blew it's tail end around to hit a building. The Hindenburg, another zeppelin, was destroyed by fire in Lakehurst, @ORGANIZATION1. If a disaster like this occurred in such a heavily populated place, it would be chaos. Impractical and unsafe, this plan wouldn't work. They would need something more stable. The plans of this weren't completely thought through. All these problems, combined, would cause them to postpone the building of the landing gear. These plans for the "new" age of transportation with dirigibles would never happen. Airplanes were a safer and more efficient new way to travel.

Dear @CAPS1 @CAPS2 @CAPS3, @DATE1's society is much more different from what it was like twenty years ago. We have phones that can easily allow us to browse the web as we please just like a computer. Our access to such a large network brings us together, can broaden mental horizons and keep many @CAPS5 hard workers on key point so that when time for work comes around, they are ready. Not everyone agrees that technology is benefit to our growing well, but I believe it keeps us moving forward and away from ignorance in all of its forms. Our construction workers work hard during their busy seasons. They vigorously build sley scraping towers, educational fucilities, additions to our health center, and even the very places we call home. However, when weather is not on their side and building anything can be hazzardous in the long run, they must still ramain at the ready when duty calls. Latelly, there has been an advancement in technology to help chane operators maintain their skills during their of season vistually. It @MONTH1 appear easy to the untrained spectation. To one it @MONTH1 seem like all they do is seat themselves in a pull a few levers, and push a few buttons. However, there is in fact a persition to such a task. Pull the lever to quickly and the crane can go sharply in the wrong direction causing it to tip over. One of feild reponters tried the @CAPS1 virtual trainer and found a @CAPS1 appreciation for the jobs at our builders. That just goes to show that @CAPS5 one does not keep such skill in check, they could in fact cause a serious malfunction on a construction site. I, personally, find it very entertaining and at the same time educational to learn a language different from my own. In fact, I teach myself @CAPS4 at home. However, @CAPS5 I did not have a computer at home, my studies would be near impossible. With @DATE1's economy going to a class outside & school, or even hiring a personal tutor, can be enough to effect anyones budget emensly. The internet provides an efficient low casting, or even free, way to help any language learner. One can even find study tips from native speakers at those who have already learned vast bit about the language. In @DATE1's society not everyone has the time to go to he library and pick up a book on a country they are interested in. Some @MONTH1 say that asking a neighbor about their home canbe just as afective, but that can awkward for those that don't particulary do well in face to face setting. However, havbing a complete at hand can make learning an enjoyabl experience. Once can find blog posts about someone's visti to there country of interest & even videos of their time there. Websites made entirely for those interesting a particular culture can also prove helpful. On the other hand, @CAPS5 someone were to be looking for and acception vacation spot recommended by locals, that information can be found as well. Some people do not love in an area where they can connect with family by a simple call or a drive. One @MONTH1 have to take a plane or pay to take with relatives. Social networks on the web makes connecting with lvoe ones easier and more affordable. The speed of instant messaging can make it seem like they are in the same room instead across the ocean. I hope that everything I have fare travel can serve a purpose to someone who has not been able to find way benefits to technological advances. Please do remember that technology can serve as a skill maintenance

tool, educational, and as a connection for our foreign born citizens. Thank you for

The mood is created by the author in the auther in the memoir by. "Narciso Rodriguez and internally reconized @CAPS1 desiner, offers the following definition of "family"." @CAPS2 @CAPS3 what and all the diffienetions of family and what a family is. "Our landlord and his daughter, Alegria (my badysitter and my first friend) lived above us and Alegria graced our kitchen table more often than not". Alegra was @CAPS4 as a part of the family not by blood not by chose but by @CAPS5 because @CAPS6 understand the Rodriguez's family @CAPS6 liked them so @CAPS6 becacme part of there family and they became part of her family. "Here, the innocence of childhood the Congregation of family and friends and endless celebrations that encompassed both formed the backdrop to life in our warm home". When your away from Home every thing you do is different the way you sleep, eat, talk, react, is all different except when your home every thing is normal again. family isn't by blood but by heart of @CAPS5 and Home isn't where you live it's where familiy is it's where memoris are that's How the mood is set by the auther

Computers were built to help the people make tasks easier and quicker. Since then, they have been updated over and over untill what they are today. Computers are a part of most peoples everydaylives, and essential to most bussiness. But the common question in our society is, are computers really benefitting us? My answer is yes. Computers do many things for us. They teach us hand-eye coordinatin, give us the ability to research effectivly, and recently, became a great way of communication, @CAPS1's are definately benefitting us. One reason why computers help us is by teaching hand-eye coordination. In a magazine I read, one expect, (@PERSON1) said that leading to type without looking is a great way of improving reflexes. The speed that you type is improved with practice. Another way it improves hand-eye coordination is by learning to click and react to different things effectively. I often on being ammused by playing games on the computer. These games usually are hard, but with my improving hand-eye coordination, I am learning how to play these games well. My father always tells me to learn my way through a computer because they are our future, soon, mostly everything will be done by them with the improving technokolgy, it is impossible for it not to be benificial to our society. Our home computers have been great at teaching me thing like hand-eye coordination. Another reason why computers are great is by making that tough history paper, just a click away. My garndfather always tells me how easy I have it. Instead of going to the @CAPS2 and having to pick out a book, I just go to google and have an entire search engine infront of me. When we go into highschool we will need a computer to suceed. To keep our essays organized, our research effective, and the clear to read typing right infront of us. My brother tells me that having a computer is the best investment has ever made. Last year, we had a science assignment to figure out how our heart beats faster. This way very easy considering I typed it in and had hundreds of ways to increase my pulse rate. Computers have changed the way we research and finish school works. The last reason why computers are fantastic is beacuse they make communication just a click away. A couple weeks ago, my coach emailed us that our gametime has changed. This doesn't seem like a big thing, but without his @CAPS1, we would've missed the game. My cousin @CAPS3 is from @LOCATION1. Me and him meet only once a year. With that limited time, we can't really get out what we need to. Recently, i bought a webcam and have been chatting with him on it every week. It is almost like he's with me. All the girls in our school can't get enough of me. So I get home after sports, go on, and theres always enough of me to go around. Webcamming is a great way of communication. With all the new computer going on sale and new appliances coming no one knows when it will stop. Well, the question still lingere, are computers benificial to our society? The answer @MONTH1 never come about, but at least for me, improving hand-eye, researching being a breeze, and communication just waiting for me is a pretty sweet deal. So for now, I stand by the opinion that computers are great, and extremely useful to everyone.

The obstacles that builders faced in making the Empire State Building a docking point reached the greatest problems. Obstacles come in all forms, depending on the size of the goal. The goal's size was immense so the range was in its greatest. The problems were law, nature, safety, and the point of docking. Firstly, the main problem was the location. "The stress of the dirigible's load and the wind pressure would have to be transmitted all the way to the building's foundation, which was nearly eleven hundred feet below." This would have not only tore down the entire building but send it crashing down onto pedestrians within the range of eleven hundred feet in the direction it was hauled. Secondly, instead of helium, dirigibles used hydrogen instead, "and hydrogen is highly flammable." This put a safety issue, especially over a highly populated urban area, like New York. Thirdly, the building was so high, it intercepted higher forces of wind. "The winds on top of the building were constantly shifting due to violent air currents." This could have made a dirigibles strain against the building or fresh against the mooring point. Lastly, law prevented all "airships flying too low over urban areas." As high as the Empire State Building was it was too close to the public. Overall, the builders were impatient and that created obstacles in allowing dirigibles to dock at the Empire State Building. They made the goal so large, it caused the obstacles to reach their range of difficulty. The purpose of the Empire State Building may be a failure, but it still is the tallest building constructed.

@CAPS1 as long as you breathe, love as long as you live. @CAPS2 was impossible, there was absolutely no way @CAPS2 could be real. Breathing seemed virtually unachievable, as if I was choking on air. Everything around me blurred, spinning viciously as I clung to the fresh cut grass. Tears diluted the burn in my eyes, but not the sting in my nose, though neither caused my body to tremble as @CAPS2 did. Attempted screams came out as muffled moans. Alone @CAPS8 helpless, I could feel her staring at me, unsure of what to @CAPS7. My best friend stood @CAPS8

watched as I grew more violent, pounding the dew soaked lawn with my fists, whimpers transforming into shrieks. A door slammed behind me @CAPS8 I felt the arms of my father, trying to guide me towards the house. Once inside, my dad buried my face in his chest in more of an attempt to silence my obnoxious wailing rather than comfort me. He apologized repeatedly, I imagine he didn't know what else to @CAPS7. @CAPS2 was too early for the "In a better place" speech, but too late for everything to be okay. I continued to cry as I stumbled up the stairs to my bedroom, @PERSON2 trailing close behind. Sitting on my bed @CAPS2 seemed like nothing was worse in the world. Suddenly, I was over-whelmed by the feeling I was missing something, like he was closer than I knew. I sat up to see his plastic sunglasses sat staring at me from my dresser. A black frame with neon blue sides. He @CAPS8 his "stunna-shades" danced through my head. Him standing out the car sunroof flexing shirtless, to propping himself up pretending to be awake in class. Seeing the glasses was like looking into his eyes. In my mind, his face held grief @CAPS8 frustration, he didn't want me crying. The few times tears fell down my face he'd say, "@CAPS3 on, suck @CAPS2 up @CAPS8 take @CAPS2 like a man!" I knew in my heart he wanted me to be with the people he loved @CAPS8 he wanted us to be smiling. With the morning sun beating on my back, I pedaled my bike as fast as my legs would allow. Reaching her front porch, I realized immediately the time I was about to spend in that house, would be like none before. When I let myself in as I always did @CAPS6 peered around the corner, eyes swollen @CAPS8 discolored. I took four steps forward @CAPS8 met her with a tearful embrace, in which I apprehended @CAPS6 wished I was him. @CAPS6 loved him in a way I'd never fathomed, but the desperate longing to be held by a loved one, I knew all too well. We cried @CAPS8 held each other because there was nothing more we could @CAPS7. When there was a pause in the sobs @CAPS8 @PERSON3 actually looked at me for the first time, noticing I looked just as terrible as @CAPS6 did. I reached into my pocket @CAPS8 pulled out his sunglasses. @CAPS2 was hard not to be selfish at a time where all I wanted was to be comforted, but I knew what I had to @CAPS7. Forcing a smile seemed infeasible, but I knew @CAPS2 was my next step. Her gaze drifted down to the palms of my hands. "@CAPS4 @CAPS5." @CAPS6 started weeping once more, I held her @CAPS8 tried to be strong. More of my friends crept out of the kitchen, tear stained @CAPS8 reddened as well. I smiled at them gently. They all took notice to the sunglasses in my hand, but didn't understand, they hadn't known him the way @CAPS6 @CAPS8 I did. We spent the day gathered around with a loss of words @CAPS8 hunger, our pizza sat untouched, the television on just to break the silence. No one said much, about anything. "@CAPS7 you remember the time he hid our biology project in the freezer?" I felt the question @CAPS3 up like vomit, too large to swallow. They just looked at me, not sure what to think. I feared I spoke too soon, I began to assume all of the melancholy @CAPS8 crying was supposed to continue uninterrupted for longer than @CAPS2 had. @PERSON3 smiled @CAPS8 nodded to my relief. "@CAPS8 you got mad because he kept putting the nuts in your noodles." I laughed aloud, I couldn't help @CAPS2. I was flooded by the memory of him trying to act confused as to why the boiling water had cashews floating on top. "@CAPS7 you remember how he'd always braid your hair?" @PERSON3 smiled even greater. The rest of that month was filled to the brim with tears, but @CAPS2 overflowed with laughter. When @PERSON1 died, laughing was the last thing I wanted to @CAPS7. @PERSON1 always generated the larger portion of my laughter, @CAPS8 with him gone I never imagined I would @CAPS1 again. But in reality, just because he left too soon doesn't mean the laughter did. My beatitude in his memory will never die."

Cooling the @CAPS1: @CAPS2 and @CAPS3 From Book @PERSON1 _____ Censorship in public libraries would be an insult to the institution. A library, a citadel of knowledge, should not be bound by a society as to what knowledge it can convey. One point of a library, the destination of researchers, is to offer information that must be sought: for those who cannot find the information in their homes without fear, for those who cannot ask their questions without retribution, the library stands as a pillar of safety. Books are incapable of judgment. To censor the books held in a library is to chip away at human progress. A freedom of thought and a freedom of press, present within our nation and increasing in presence around the @CAPS5, precludes the idea of this censorship. If any book is subject to criticism or opposition, are not all books worthy of the same? To value one opinion or perspective less than another is to debase the entire culture from which libraries have arisen. Libraries are a communal institution, open to all views and writings. The point of bringing books together under one roof is to equate them, and give them all equal standing as literature or scholarly works. From

personal experience, censorship in the library has cost me precious time, and has stolen from me parts of my life. Growing up in a small town, where ideas of gender and sexuality were somewhat firmly set, any search for dissenting opinion was often fruitless. When I visited my school's library, as a child searching for answers about my sexuality, I found little aid. Around the library were a thousand stories of a man and woman falling in love, but never did I find a fairy tale of two princes. It was not until I left the school that I found that such books did exist in my old school library, but kept removed, off the shelves, restricted. More insulting than finding books of @CAPS4 issues completely unrepresented was to find that they were treated so separately. Here lies the problem. Some people believe that if minority opinions or values are unrepresented, they will disappear. Such is the point of censorship: ignoring an issue or a life-choice to the point of extinction. But books cannot shout their values. They cannot shove information down our throats. Books must be read, we must give our consent to their knowledge. Unlike an advertisement that might accost us unawares, we must pick up a book and open it to receive its guidance. If my library had done its job and given me the guidance I sought, I would have grown so much more easily. I would have learned not only how to express and accept myself, but I might have grown to more easily accept others as well. In the past few years, with the effects of @CAPS5 @CAPS6 @CAPS7 reaching the newest generation, @LOCATION1 has searched for ways to pay homage to the victims of the violence of @CAPS8 and of the @CAPS9. What the country finds, however, is that it cannot effectively memorialize the tragedies. In trying construct a monument, the government and culture find that they have little to build off of. The products of murder and book-burning have resulted in an emptiness, a void. As such, architects have created what @MONTH1 be called 'anti-monuments', commemorating a void to posterity to memorialize what was lost. One of the most powerful, to me at least, appears in the form of a negative bookshelf: a solid wall, with gaping holes in the form of book spines, ranging across the rows. Such is the knowledge lost from book-burning. We cannot even describe what is lost, for the knowledge has vanished. We must ask, what are we missing? What views, what prose, what beauty has been taking from us while we continue living, never having the chance to glimpse it? This is the effect of library censorship. To remove a book from its natural and rightful place on a shelf is to set its words aflame. Once it is gone, it will be forgotten. To protect our posterity, to enlighten our descendants, we must work to preserve all books, any book that appears offensive, or disgusting, or brave, or new. Let the reader decide its value. Let the person in search of answers pick it up or leave it behind. Give the book a chance for it @MONTH1 have a power that is unrealized. Leave the libraries as they are, as the monuments to the preservation and progression of knowledge and wisdom.

Dear @CAPS1, I beleive that using computers is a good thing. They can help you learn about subjects of places you think are interesting you don't know about. They can help save the environment. These are the reasons why I think using computers is a good thing. First, they can help you learn about new subjects. Say you are doing a report for school on the @ORGANIZATION1 @ORGANIZATION1 of the @CAPS2, but you didn't know any thing about them. You could just go sit at your computer, enter "@ORGANIZATION1 @ORGANIZATION1 of the @CAPS2" in a google search, and press enter. There you here hundreds even thousands of entries about the @ORGANIZATION1. You could sit forever and learn all about these magnificent creations. You can learn about any subject on a computer, at anytime. You could even learn about a computer and all of its history! Seond, they can help save the environment. People are always using paper and paper comes from trees. When we

cut down trees we are harming our environment. We are depleting our oxygen supply and destroying habitats of animals and insects. If everybody used computers, we would be using less paper. We could use to send documents and papers, we could bring to tax appointments and pair suits. Computers could even be used for school work. The teacher could assign the homework email it to the student the student could fill it out and email it back. Sure we would still have to use paper for somethings, but we would be using in way less. People could also use less fossil. We could talk via the internet and things like skype to communicate witness waring to and burn. Thirdly, computers could help us advance into the. Computers can help find ways to do many things such as better medical treatments, more efficient travel and even every day life. We could find better ways to treat serious medical conditions with the help of computers. We could find ways to treat cancers and maybe even the common cold. Computers could also hep us find more efficient way. They could help find a mroe efficient feel, efficient of it could help make a teleportation device. It could also help us explore deeper into space and find more planets and galaxies. Computers could also help us with our every day life. When you get up in the @TIME1, imagein being able to screen and being able to have a hot shower, your breakfast and your work equipment all ready within five minutes. That really would be the future of computers. Those are all of any reasons for having computers from school reasearch to space and beyond.

Essay

'''text

In the memoir, the author creates a very peaceful mood. He achieves this by using a blunt voice and unusual punctuation. The author's voice is very blunt. For example, he describes his house as a "simple house" numerous times in the memoir. He tells the reader more than enough about his simple home, and there is almost no conflict in this memoir. This gives the reader a sense of peace and never leaves the reader hanging or wondering about something. To help him with that, the author uses lots of unusual punctuation. Parenthesis are used five times in this writing, as well as five words with dashes. This punctuation is used to give extra information, like the age of "twenty-one-year-old Rawedia Maria" or about "Passionate Cuban music (Which I adore to this day)." When the author gives extra information, it gives the reader a sense of peace and makes him feel "at home", which is the topic of the memoir.

They ran into a few problems when it @CAPS1 to building this. They realized after that it wasnt that smart or that safe to have a dirigible hanging by a 102 floor building just by one cable tether. Another problem they ran into was the fact that they couldnt control mother nature. If it was a really windy day out it would be hard to keep it steady. And if there wasnt enough support on the building frames, then it could potentially collapse.

Essay

'''text

The new trimester had started and leadership was my second period. With no idea of what the responsibilities of a leadership student were, I was skeptical on taking the class. After days of taking the class, I began to enjoy it more and more. After a week or so, the teacher announced we would be on stage helping set up and organize the upcoming assembly. I had never done anything of the sort so I was somewhat excited. Days went by and the entire class practiced setting up the assembly, running to our places, moving props, and stacking chairs. The day of the assembly finally arrived, it was time for the show. The students poured into their seats as we scurried around behind the curtains. Everything was set up perfectly. The curtains rose and the assembly began. My peers and I stood behind the stage watching the assembly unfold. The school band preformed a long boring set of songs, the curtains fell and the entire leadership class ran out on stage, picked up and stacked the chairs that the band just used. After, we all ran to get the bleachers and dragged them out to the front of the stage. The choir was now going to preform, we then retreated back behind the curtains. The choir sang their songs, and we watched, but as they proceeded to set up for their last song, students moved around leaving a large open spot in the top row. With the choirs last song, they preformed a simple swaying dance to go along with their song. My leadership class friends and I, noticed this large open spot in the choir and thought it would be hilarious if one of us went up there and pretended to sing and dance. However, none of us had enough courage to do it. The choir finished their song and dance, the first assembly was over. We then cleaned up and got ready for the second assembly. It was time for the second assembly and everything was going to be preformed again. The students came in, sat in their seats, the band played, we stacked chairs and moved bleachers. It was time for the choir to come out and sing once more. The thought of how funny it would be to go up on the bleachers and dance came upon us once again. Finally we convinced one of our classmates to do

it. She ran to the choir room and put on a choir robe, put her hair in a funny bun fixed on her forehead, and stepped up onto the bleachers. She took the open spot in the top row. The song began as well as the dance. She broke into random dancing, not in any way matching up with the other dancing choir members. It was obvious she did not belong up there. The crowd soon began to realize what was going on. Laughter broke out in the seats, but soon after laughter broke out behind the stage as well. I was laughing like I had never laughed before. It was painful, tears pouring down my face, I was gasping for air. Running out of breath and bracing myself for a deep inhale, when right at that moment the song had a dead silent pause. The auditorium went completely silent, I inhaled in, and as I took in that air, my body managed to let out an extremely loud embarrassing screeching noise. People behind the curtain stared at me, I knew that it was heard throughout the auditorium. Embarrassed I laughed even harder, causing more pain, tears, and lack of oxygen. The song ended followed by the end of the laughter, then by the end of the assembly. The girl stepped down from the bleachers and we all scrambled out of the building, hiding the robe along the way. We laughed all the way to our next period, listening to the students in the hallway talking about it. Giggles filled the school for hours. Talk of who it was, what actually happened, and why it happened were on everyone's minds, except for ours. The second period leadership students knew exactly what had happened. We had the pleasure of telling everyone in school about the dirty little details. The following days however, the teachers also got word of it. Not thinking our actions all the way through, we would soon have to face the consequences. We were told it was irresponsible and child-like. We had a plethora of possible punishments, in school suspension, @DATE1 school, a referral, an apology to the choir class, and loss of the privilege of being in leadership. After the school board talked to our parents and gave the event serious consideration, we got out of it with having one day of @DATE1 school and apologizing to the entire choir class. The school board, realized it was just a joke, letting us off easier than it could have been. In my eyes the prank was well worth it. For weeks on end, every night I would go to bed laughing about that leadership assembly.
